ANNUAL INDEX
Journal of Chemical Education
Volume 68, 1991

The annual index for Volume 68 of the *Journal of Chemical Education* is divided into several parts. Book Reviews are indexed separately both by author and title. Author of articles are listed separately and are cross-referenced to other authors of the same article. The subject index includes titles listed by keywords, subject listings, and listings of articles by feature column. The latter two are distinguished from the titles by printing the listing headings in italics. The following abbreviations are used throughout the index to indicate in which feature column an article appeared.

AA	Applications and Analogies	F&R	Filtrates and Residues	PROD	Products of Chemistry
BULLETIN	The Computer Bulletin Board	IC	Inventory Control	REACT	Reactivity Network
CB	Concepts in Biochemistry	IND	Real World of Industrial Chemistry	SAFETY	Safety in the Chemical Laboratory
CII	The Chemical Information Instructor	INS	Insights	ST	Safety Tips
CK	Chemistry for Kids	LTE	Letter to the Editor	TD	Tested Demonstrations
CP	Chemical Principles Revisited	ML	The Microscale Laboratory	TF	Textbook Forum
CS	Computer Series	MODLAB	The Modern Student Laboratory	TICI	Topics in Chemical Instrumentation
EQE	Exam Question Exchange	OP	Overhead Projector Demonstrations	USE	What's the Use?
ER	Educational Research	PO	Provocative Opinion	VIEW	View from My Classrooom

Author Index

A

Abel, Kenton B.; Hemmerlin, William M. Explaining resonance—a colorful approach. 834
—*see* **Hemmerlin, William M.**

Abhyankar, Sudhir B.; Last, Arthur M.; Monaghan, Patrick K.; Perkins, Robert R.; Canham, Geoffrey W. Rayner; Reed, J. Norman; Webb, Michael J. Scholarship and chemistry teaching in the two-year college. 145

Abhyankar, Sudhir B.; Strickland, Dean W. Bromination using N-bromosuccinimide: A simple introductory organic chemistry experiment. 253

Abrash, Henry I. Missing: A partial structure search exercise (LTE). 86

Ackerman, A. H.—*see* **Murphy, J. A.**

Acton, Nancy—*see* **Roth, Ronald J.**

Adams, David L. College chemistry for business students using the issues-directed approach. 483

Aduldecha, S.; Akhter, P.; Field, P.; Nagle, P.; O'Sullivan, E.; O'Connor, K.; Hathaway, B. J. The use of the desktop molecular modeller software in the teaching of structural chemistry (CS). 576

Ahmad, Jamil. When figures signify nothing. 469

Ahuja, I. S.; Tripathi, Shailendra. An undergraduate laboratory experiment involving synthesis and spectroscopoy of metal complexes. 681

Aikens, D. A.—*see* **Onasch, O. F.**

Akeroyd, F. Michael. Chemical education at the crossroads (PO). 305

Akhter, P.—*see* **Aduldecha, S.**

Alberici, Rosana M.—*see* **Nobrega, Joaquim A.**

Alberty, Robert A. Chemical equations are actually matrix equations. 984

Aldaz, Antonio—*see* **Sanchez, Gaspar**

Alexander, John J., *editor.* Exam question exchange. 42, 141

Alger, Donald B. The water solubility of 2-butanol: A widespread error (TF). 939

Ali, Saqib; Kalsoom, Abida. Selection of recrystallization solvent. 877
—**Mazhar, M.** Empty jam bottle or qualitative TLC tank. 593
—**Mazhar, M.** Gas cell for infrared spectroscopy. 668

Allan, David S. Comment on Monte Carlo simulations of polymer configurations (LTE). 621

Allen, Anthony; Haughey, Adam J.; Hernandez, Yolanda; Ireton, Scot. A study of some 2-chloro-2-methylpropane kinetics using a computer interface. 609

Altena, James A.—*see* **Herzenberg, Caroline L.**

Amend, John R.; Tucker, Kathleen A.; Furstenau, Ronald P. Computer interfacing: A new look at acid–base titrations (CS). 857

Aminabhavi, Tejraj, M.; Harogoppad, Shivaputrappa B. Kinetic and thermodynamic study on the sorption of liquids by polymer films: A simple laboratory experiment. 343

Anderson, Alexander J. Covalent labeling of a protein: An experiment in protein technology. 521

Angnes, Lucio—*see* **Gutz, Ivano G. R.**

Anthony, Erling. Synthesis of an insoluble salt: A stoichiometry experiment (F&R). 1040

Apak, Resat; Ter, Izzet. Finding the bond angle (LTE). 970.
—*see* **Tutem, Esma.**

Apak, Vildan—*see* **Tutem, Esma.**

Arce, Elsa M.; Ramirez, Roman; Cortes, Felipe; Ibanez, Jorge G. Experimental demonstration of corrosion phenomena: Part II. corrosion phenomena of steel in aqueous media. 350

Armstead, D. E. F. Synthetic applications of aromatic metabolites. 698

Arnaiz, Francisco J.; Casares, Juan A. Recovering solvent from iodine solutions. 516

Arney, B. E.—*see* **Garrett, D. D.**

Arnold, Wilfred N.; Dalton, Timothy P.; Loftus, Loretta S.; Conan, Patrick A. A search for santonin in artemisia pontica, the other wormwood of old absinthe. 27

Atwood, Charles H.—*see* **Godfrey, Judy.**

Atwood, Charles H.—*see* **Kreyenbuhl, Julie A.**

Ayala, N. P.—*see* **Ballew, R. M.**

B

Bailey, Ronald A.; Geisler, Cheryl. An approach to improving communication skills in a laboratory setting: The use of writing consultants. 150

Balkus, Kenneth J., Jr.; Ly, Kieu T. The preparation and characterization of an X-type zeolite: An experiment in solid-state chemistry. 875

Ballew, R. M.; Demas, J. N.; Ayala, N. P.; Grubb, M.; Snyder, S. W. Computer interfaced fast kinetics luminescence decay experiment (CS). 222

Banks, Alton. Magnesium (USE). 196
—What's the Use? (LTE). 712.

Banta, M. C.—*see* **Garrett, D. D.**

Bare, William D. Freezing point depression in a bottle of soda (TD). 1038
—**Mellon, E. K.** Thermochromic behavior of cobalt(II) halides in nonaqueous solvents and on filter paper (TD). 779
—*see* **Berger B., Tomas G.**

Barlow, Arthur; Diem, Max. Normal coordinate calculations as a classroom computer project (CS). 35

Barnes, Denise—*see* **Brandt, Tessa.**

Barnes, Zexia K. Alternative flame test procedures. 246

Barrow, Gordon M. Learning chemistry: Intellectual integrity or mental servility. 449

Barthel-Rosa, Luis—*see* **Brown, Alan B.**

Bassow, Herb. Interdependency and the importance of errors in chemistry: How the search for a single error led to reexamination of the work of five Nobel Laureates and

revised values for certain fundamental constants. 273
Bates, Donald J.—*see* **Solomon, Sally**
Batt, Russel H., *editor.* The computer bulletin board. A39, A95, A282
Battino, Rubin. A safe and inexpensive device to show the conductivity of solutions. 79
—The critical point and the number of degrees of freedom. 276
—The disco analogy (AA). 285
—*see* Scharlin, Pirketta
Bazsa, Gyorgy; Nagy, Istvan P.; Lengyel, Istvan. The nitric acid/nitrous acid and ferroin/ferriin system: A reaction that demonstrates autocatalysis, reversibility, pseudo orders, chemical waves, and concentration jump. 863
Beall, H. In-class writing in general chemistry: A tool for increasing comprehension and communication. 148
—Report on the WPI conference: New practical examples for general chemistry. 381
—Report on WPI–NEACT Conference: "General chemistry: Approaching the 21st century." 835
Beasley, Warren. Matching laboratory learning goals to evaluation of student performance: A standards-based approach. 590
Beauvais, Robert; Holman, R. W. An internal comparison of the intermolecular forces of common organic functional groups: A thin-layer chromatography experiment. 428
Beck, J. Christopher—*see* **Beck, John F.**
Beck, John F.; Beck, J. Christopher. Assigning grades to absent students—revisited. 319
Becker, Charles E. Comparison of two methods for scoring examinations. 309
Becker, Robert. Coffee-stirrer structures. 459
—Wet dry ice (F&R). 782
Bedenbaugh, Angela O.—*see* **Bedenbaugh, John H.**
Bedenbaugh, John H.; Bedenbaugh, Angela O. An inexpensive water leveling device for gas law experiments. 673
Bell, Harold M.; Harrington, Kevin; Lee, Jungun. Chemical databases and the laboratory computer (BULLETIN). A99
Benfey, O. Theodor—*see* **Brock, William H.**
Bennett, Imogene—*see* **Birk, James P.**
Berger B., Tomas G.; Mellon, Edward K.; Bare, William D. Handling dry ice in a grade school setting. 868
—*see* **Mellon, E. K.**
Berman-Robinson, Sherry. Adding heart and soul to the chemistry classroom (VIEW). 999
Betterton, Eric A. Acid rain experiment and construction of a simple turbidity meter. 254
Bidlingmeyer, Brian A.; Schmitz, Stefan. The analysis of artificial sweeteners and additives in beverages by HPLC: An undergraduate experiment (The modern student laboratory). A195
Bigger, Stephen W.; Meilak, Geoffrey A.; Verity, Bruce. Solutions calorimetry apparatus for undergraduate teaching. 528
Birdwhistell, Ralph K., *editor.* Textbook forum. 208, 474, 728, 826, 939, 1003
Birk, James P., *editor.* Computer series, 35, 222, 297, 403, 486, 576, 659, 773, 857, 923, 985
Birk, James P.; Ronan, Martha; Bennett, Imogene; Kinney Cheri. Reactivity of nickel (REACT). 48
Birnbaum, Ernest R. What's the use (LTE). 712
Bishop, Muriel Boyd, *editor.* Chemical principles revisited. 138, 215, 291, 397, 566, 656, 759, 927
Bishop, R. Daniel, Jr. Grading to reward accumulated knowledge. 492
Blanck, Harvey F.—*see* **Foote, John D.**
Blankenship, James F.; Costello, Steven; Sprouse, Matthew; Settle, Frank A., Jr.; Bolen, Rosina H.; Pleva, Michael A. A flexible automated laboratory system for the qualitative analysis of selected metal cations (TICI). A65
Blankespoor, Ronald L.; Piers, Kenneth. Hydroboration-oxidation of (1R)-(+)-α-pinene to isopinocampheol: A microscale experiment that displays regio- and stereochemistry using NMR spectroscopy and molecular mechanics calculations. 693
—**Piers, Kenneth.** Promoting the discipline of chemistry: A vacation chemistry program for high school students. 548
Blazyk, Jack—*see* **Rana, Fazale R.**
Block, Toby. Student understanding (LTE). 969
Bodner, George M. I have found you an argument: The conceptual knowledge of beginning chemistry graduate students. 385

Ammonia fountain in a micropipet, An (ML). **Dianne N. Epp.** A297

Ammonium hydroxide does not exist (LTE). **George B. Kauffman.** 534

Ammonium hydroxide: What is its structure? (LTE). **John T. Yoke.** 533

Ammonium hydroxide: What is its structure? (LTE). **Thomas R. Tuttle, Jr.** 533

Analogy, Bright-line spectrum (F&R). **Richard A. Samsa.** 412

Analytical chemistry

Acid/base indicators: A first experiment for the quantitative analysis laboratory, Statistical evaluation of. 329

Advanced titration plots using spreadsheet scripting (CS). 923

Air-displacement pipetter, Build your own. 355

Alternative flame test procedures. 246

Analysis of artificial sweeteners and additives in beverages by HPLC: An undergraduate experiment (MODLAB). A195

Automated laboratory system for the qualitative analysis of selected metal cations, A flexible (TICI). A65

Base unknowns in the introductory analytical chemistry lab, Multifunctional. 600

BASIC program for computing reactant combinations from approximate elemental analysis data, A (CS). 773

Berman-type balance, Construction and use of a. 882

Chemical adventures of Sherlock Holmes: A Christmas story. 1023

Chemical databases and the laboratory computer. A99

Chloride in natural waters: An environmental application of a potentiometric titration. 334

Computer interfaces of acid–base titrations (CS). 857

Computerized temperature measuring system using a commercial pH/ISE meter (MODLAB). A201

Construction and use of an inexpensive microburet (ML). A125

Construction of a low-cost solution cell for infrared analysis (ML). A124

Conundrums of chemical nomenclature, Some. 1009

Data for instruction in statistical methods, Reproducible bad. 310

Detemination of concentrations of species whose absorption bands overlap extensively: An instrumental analysis laboratory experiment (CS). 300

Determining the composition of an unknown using atomic emission spectroscopy and a spreadsheet sort (BULLETIN). A286

Didactic application to riboflavin HPLC analysis: A laboratory experiment. 78

Electrode assembly, Fabrication of a multipurpose graphite. 342

Electrode, The preparation of an inexpensive, commercial-type. 532

Evaluation of commercial detergents containing anionic surfactants as column packings. 74

Evaluation of drop counting as a volume measurement (ML). A120

Experiment on the determination of iodine number of fats and oils by coulometric titration. 64

Experiment that introduces experimental design and optimization, Attaining optimal conditions: An advanced undergraduate. 878

Experiments in synchronous fluorescence spectroscopy for the undergraduate instrumental chemistry course. 433

Forensic examination of pen inks. 596

Forensic laboratory experiment: Who shot J.R.? 1025

Glass electrodes, An application of nonfunctional. 669

Group I, More efficient removal of Pb(II) from Ag(I) and Hg(I) in. 943

Halogenated solvents for halogen–halide extractions, An alternative to (ST). 509

History of spectroscopy, The early. 631

How to break the ice with a ruler. 327

Instrumentation and maintenance requirements of Third World laboratories (TICI). A300

Instrumentation as seen from the table of contents of seven editions of the same textbook, A chronicle of. 543

Introduction to signal processing in chemical measurement. A147

Investigation of experimental parameters. 784

Ionophoresis. 178

Keeping a balance in the first analytical course: What should it cover? 838

Microcomputer automation of volumetric titration (BULLETIN). A95

Molar mass and acid constant for a weak acid, Determination of. 674

Optimization of HPLC and GC separations using response surfaces. 162

Photometry with overhead projector experiments, Teaching (OP). 325

Pittsburgh Conference on analytical chemistry and applied spectroscopy: An educational experience. A37

Preparation and testing of a fused-silica gas chromatography capillary column: An experiment for a senior undergraduate laboratory module (MODLAB). A249

Qualitative analysis of eleven household compounds. 328

Qualitative analysis scheme without hazardous wastes, A short. 942

Real life samples for unknowns in analytical chemistry, The use of. 598

Se^{4+} by its catalysis of the ferric-ion/thiosulfate reaction, Estimation of microgram amounts of. 512

Separating or identifying plastics, Method for. 348

Simulation of single-step chronoamperometry via spreadsheet (BULLETIN). A283

Spreadsheet calculations for X-ray powder diffraction patterns (BULLETIN). 235

Standard solutions, Student preparations of. 505

Statistics, Small sample. 470

Systematic chemical separation of cations in aqueous media with computers (CS). 659

Test for carbon dioxide, An oldie but goodie. 778

Titration of chromate–dichromate mixtures: A new experiment for quantitative analysis. 677.

Titrimetric determination using laser-beam scattering for endpoint determination (TD). 155

Analytical chemists in industry: A short course to encourage students to attend graduate school, Professional. **Richard A. DePalma; Alan H. Ullman.** 383
Analyzing first-order kinetics (LTE). **B. Borderie.** 710
Analyzing first-order kinetics (LTE). **L. Glasser.** 710
Anions—A puzzle. **Dorothy J. Mandelin.** 1033
Ant alarm pheromone, The synthesis of 2-methyl-4-heptanone: An. **Elma A. de Jong; Ben L. Feringa.** 71
Anti-Markovnikov addition to alkenes, A quick and effective demonstration of. **Trevor M. Brown; Alan T. Dronsfield; Ian Hitchcock.** 785
Antimalarial drug Qinghaosu, A facile semisynthesis of the. **Ronald J. Roth; Nancy Acton.** 612

Apparatus

Air-displacement pipetter. Build your own. 355
Alternative to commercial microbore HPLC fittings, An inexpensive. 599
Automated laboratory system for the qualitative analysis of selected metal cations, A flexible (TICI). A65
Balance as tensiometer and densimeter, An analytical (F&R). 158
Balloons and trash bags in a glove box, Blowing up. 508
Berman-type balance, Construction and use of a. 882
Borane solutions, An alternative procedure for handling. 613
Calorimetry apparatus for undergraduate teaching, Solution. 528
Chromatography sprayer for the chemistry lab, Inexpensive. 432
Computerized temperature measuring system using a commercial pH/ISE meter (MODLAB). A201
Condenser for reflux operations in a drybox, A simple and inexpensive. 77
Construction and use of an inexpensive microburet (ML). A125
Construction of a low-cost solution cell for infrared analysis (ML). A124
Construction of a simple turbidity meter, Acid rain experiment and. 254
Convenient use of applicators for PTLC. 70
Degassing samples, A rapid method for. 604
Device for quantitative conductivity experiments, An inexpensive. 80
Dry ice in a grade school setting, Handling. 868
Drying system, A fast. 500
Electrode assembly, Fabrication of a multipurpose graphite. 342
Electrode, The preparation of an inexpensive, commercial-type. 532
Evaluation of commercial detergents containing anionic surfactants as column packings. 74
Filling ampules with air-sensitive compounds without a glove box. 261
Filtration of protein precipitates, Reducing sample loss during the. 522
Fix for air current problems with top-loading electronic balances in the lab. 82
Flash chromatography, A pressure source for. 790
Fused-silica gas chromatography capillary column: An experiment for a senior undergraduate laboratory module. The preparation and testing of a (MODLAB). A249
Gas cell for infrared spectroscopy. 668
Gas chromatography collection tube adapter, A semipreparative (MODLAB). A142
Gas law apparatus, Inexpensive. 667
Glass electrodes, An application of nonfunctional. 669
Inert atmosphere techniques for the microscale laboratory (ML). A60
Inert atmosphere workstation, An improvised. 1055
Instrumentation and maintenance requirements of Third World laboratories (TICI). A300
Instrumentation for measuring in vivo chlorophyll fluorescence induction. 963
Jam bottle or qualitative TLC tank, Empty. 593
Labyrinth calorimeter for reaction-solution experiments, A low-cost. 671
Laser photometer that is assembled in seconds, A. 530
Lighted stage for use in chemistry demonstrations, A (TD). 594
Liquid level control device, An automated. 670
Low-cost, portable, and safe apparatus for lecture hall conductivity demonstration. 619
Magnetic models of ions and water molecules for overhead projection (OP). 245
Magnetic stirrer improvement and design of clustered, Teflon-encapsulated magnetic stirbars. 85
Mercury-free alternative for temperature measurement in aluminum blocks (ML). A244
Method for producing efficient concentric tube distillation columns, A simple. 616
Micro-Kipp gas generators (ML). A297
Microcomputer automation of volumetric titration (BULLETIN). A95
Microwave ovens in the laboratory, Domestic. 346
NMR tube design for external referencing, A novel. 269
Rotating disk electrode. 352
Safe and inexpensive device to show the conductivity of solutions. 79
Safety shield from a plastic water jug, An inexpensive. 234
Soap bubble respirometry. 617
Stir motor assembly—Simple and cheap (IC). 1041
Stirring, sideways. 525
Sublimation apparatus, A simple (ML). A62
Syringe cleaner, Vacuum. 520
Techniques for low vacuum leak detection with a tesla coil, Efficient, inexpensive, and useful. 526
Using a motor to demonstrate conductivity (OP). 160
Viscometer design for polymer solutions. 63
Water leveling device for gas law experiments, An inexpensive. 673

Apple IIe game port, Measuring pressures through the (BULLETIN). **James P. Birk; David Walters; Evert Fruitman.** A224

Applications and analogies, edited by Ron DeLorenzo

Error, precision, and uncertainty. **Charles J. Guare.** 649
Lost in the desert. **Stephen DeMeo.** 114
The disco analogy. **Rubin Battino.** 285
The quantum shoe store and electron structure. **M. Bonneau.** 837

Applicators for PTLC, Convenient use of. **Rajiv Sharma.** 70
Are we teaching the right things in general chemistry? **Julie A. Kreyenbuhl; Charles H. Atwood.** 914
Artificial sweeteners and additives in beverages by HPLC: An undergraduate experiment, The analysis of (MODLAB). **Brian A. Bidlingmeyer; Stefan Schmitz.** A195
Assessing the validity of the unireactant lumped approximation in multireactant systems following first-order kinetics. **F. Xavier Malcata.** 288
Assessment of chemistry programs (LTE). **Robert C. Kerber.** 711
Atomic and molecular orbital displays using mathematica, Two-dimensional (CS). **Randolph Cooper; Joseph Casanova.** 487
Atomic emission spectroscopy and a spreadsheet sort, Determining the composition of an unknown using (BULLETIN). **Elvin Hughes; Jr., Consetta D. Dugas; Sam Hodges; Sheila L. Tracey.** A286
Atomic orbitals (LTE). **Peter Senn.** 710

Atomic structure, How to get more from ionization energies in the teaching of. **Paolo Mirone.** 132
Atomic two-electron systems, On the interpretation of simple closed-shell and split-shell wave functions of. **Marten J. ten Hoor.** 197
Atomic weights, A simple laboratory experiment illustrating the relative nature of. **Randolph B. Huff; David W. Evans.** 675
Atoms in interstellar space, Very large hydrogen. **David B. Clark.** 454
Aufbau mnemonics (LTE). **Eric R. Scerri.** 445
Aufbau rewritten. **Ramsharan Singh; S. K. Dikshit.** 396
Autocatalysis, reversibility, pseudo orders, chemical waves, and concentration jump, The nitric acid/nitrous acid and ferroin/ferriin system: A reaction that demonstrates (TD). **Gyorgy Bazsa; Istvan P. Nagy; Istvan Lengyei.** 863
Automated laboratory system for the qualitative analysis of selected metal cations, A flexible (TICI). **James F. Blankenship; Steven Costello; Matthew Sprouse; Frank A. Settle, Jr.; Rosina H. Bolen; Michael A. Pleva.** A65
Automation of volumetric titration, Microcomputer (BULLETIN). **W. C. Mak; R. S. Tse.** A95

B

Bacteria: An undergraduate laboratory experiment, Testing for chemical toxicity using. **H. Brouwer.** 695
Baker's yeast: An undergraduate laboratory synthesis of ferrocenylmethanol, Reduction of a carbonyl compound using. **Richard E. Bozak; Michael E. Prater; Ronald J. Hicks.** 427
Balance as tensiometer and densimeter, An analytical (F&R). **Manuel Sanchez-Rubio; Jose R. Castellanos-Ortega; Jorge E. Puig.** 158
Balance, Construction and use of a Berman-type. **Laurence Huestis; Joseph Gormley.** 882
Balloons and trash bags in a glove box, Blowing up. **Gerald C. Roper; Gabor Kiss; Shakti L. Mukerjee; Carl D. Hoff.** 508
Band gap energy, Preparation of semiconducting materials in the laboratory: Production of CdS thin films and estimation of their. **Jorge G. Ibanez; Omar Solorza; Enrique Gomez-del-Campo.** 872
Band theory, The electronic structure of graphite: A chemist's introduction to. **Alejandro Pisanty.** 804
Bandwidth: An instrumental methods laboratory exercise, Determining optimum spectral (MODLAB). **Don D. Gilbert.** A278
Base unknowns in the introductory analytical chemistry lab, Multifunctional. **Jonathan A. Werner; T. C. Werner.** 600
BASIC program for computing reactant combinations from approximate elemental analysis data, A (CS). **Udayampalayam P. Senthikumar; Rajogopalan Vijayalakshmi; Ramasubbu Jeyaraman.** 773
"Bean lab": A simple introduction to equilibrium, The (F&R). **Paul D. Dickinson; Walt Erhardt.** 930
Beginning chemistry students? What do instructors expect from. **Tony Mitchell.** 116
Belousov–Zhabotinskii reaction, A spectroelectrochemical demonstration of a modified. **Jeffrey Rosenthal.** 794

Belousov–Zhabotinsky reagents, Recipes for. **Wolfgang Jahnke; Arthur T. Winfree.** 320
Benzene tree at the Kekule festivities, Hofmann's. **William H. Brock; O. Theodor Benfey; Susanne Stark.** 887
Benzoylacetic acid: Synthesis and examination of the tautomeric equilibrium. **Stuart Rosenfeld; Alecia Williams.** 66
Berman-type balance, Construction and use of a. **Laurence Huestis; Joseph Gormley.** 882
Beverages by HPLC: An undergraduate experiment, The analysis of artificial sweeteners and additives in (MODLAB). **Brian A. Bidlingmeyer; Stefan Schmitz.** A195
Biases-our responses, Our only recourse to (LTE). **Richard E. Rice; Joanne A. Charbonneau.** 358
Bibliography 1980–1990, Teaching writing in college chemistry: A practical. **Nancy Patterson Shires.** 494
Biennial Conference on Chemical Education, Report from the 11th. **E. K. Mellon; E. J. Pulliam; T. G. Berger B.** 715
Biocatalysis in organic solvents. **K. R. Natarajan.** 13

Biochemistry

Air-displacement pipetter, Build your own. 355
Basic cloning experiment for the undergraduate biochemistry lab. 707
Binding of Coomassie Brilliant Blue to bovine serum albumen: A physical biochemistry experiment. 262
Biocatalysis in organic solvents. 13
Biomineralization. 627
Centrifugation, Rate zonal sedimentation and isopycnic (LTE). 798
Coagulation kinetics: A laboratory experiment. 523
Copper precipitation in the human body. 365
Covalent labeling of a protein. 521
Determining the conformation of a ligand bound to an enzyme. 258
Development of an undergraduate biochemistry laboratory course with NSF–CSIP support. 46
Development of olestra, a noncaloric substitute for dietary fat (PROD). 476
Didactic application to riboflavin HPLC analysis: A laboratory experiment. 78
Enzyme activity and inhibition, A dynamic model to demonstrate. 286
Enzymes at the frontier (1822–1833) (LTE). 534
Extraction and identification of monoterpenes. 267
Field inversion agarose gel electrophoresis of DNA. 81
Filtration of protein precipitates, Reducing sample loss during the. 522
Functions of calcium in biotic structures. 10
Glucose 6-phosphate dehydrogenase deficiency. 7
HPLC mapping of protease digestion products: A biochemistry laboratory experiment, Insulin: 958
Instrumentation for measuring in vivo chlorophyll fluorescence induction. 963
Ionophoresis. 178
Laboratory project in N-only bridging thiocyanate, homo- and heterobinuclear complexes. 59
Method of preparing sucrose density gradients. 58
Peptide HPLC experiment for biochemistry laboratory. 72
Purification of glucose-6-phosphate dehydrogenase by ion-exchange chromatography, Versatile partial. 265
Purification of Milk whey α-lactalbumin by immobilized metal-ion affinity chromatography. 430
Rates of proton exchange of thiamine hydrochloride by ^{1}H NMR spectroscopy: A bioorganic experiment for the undergraduate laboratory, Determination of. 683
Search for santonin in *Artemisia pontica*, the other wormwood of old absinthe. 27
Separations utilizing gel filtration and ion-exchange chromatography. 168
Solutions in the biochemistry lab: An essential, basic skill, Preparing. 1054
Superoxide dismutase and the Briggs–Rauscher reaction (TD). 57
Synergistic effects in binary solvent mixtures: A simple approach to a special case of nonideal binary mixture behavior. 347
Synthesis of an ant alarm pheromone. 71
Synthetic applications of aromatic metabolites. 698
Toxicity using bacteria: An undergraduate laboratory experiment, Testing for chemical. 695

Bioinorganic chemistry–IV, Why calcium? Principles and applications in. **Ei-Ichiro Ochiai.** 10
Biomineralization: Principles and applications in bioinorganic chemistry–V. **Ei-Ichiro Ochiai.** 627
Blue-and-gold reaction, A reversible (TD). **Marie C. Sherman; Deborah Weil.** 1037
Boat conformations of cyclohexane, A simple way to draw the chair and. **Pierre Leriverend.** 957
Boiling point, Altitude and (LTE). **Donald Peterson.** 622
Bond angle, Finding the (LTE). **Resat Apak; Izzet Ter.** 970
Bond? Can addition of a bonding electron weaken a. **A. D. Buckingham; T. W. Rowlands.** 282
Bond location in chair cyclohexane and related structures, A projection for. **A. A. Woolf.** 646
Bonding method: Extension to main group elements, The *styx*. **Zvi Szafran.** 127
Borane solutions, An alternative procedure for handling. **Ann M. Fabirkiewicz.** 613
Boron flame shamrock, St. Patrick's day special—a (TD). **Thomas T. Earles.** 57
Briggs–Rauscher reaction, Superoxide dismutase and the (TD). **David A. Franz.** 57
Bromination using *N*-bromosuccinimide: A simple introductory organic chemistry experiment. **Sudhir B. Abhyankar; Dean W. Strickland.** 253
Buffer buffs, A problem for (EQE). **J. Ramon Leis; M. Elena Pena; C. Herrero-Latorre.** 141
Buffer solutions, Chemical equilibrium: VI. (CP). **Adon A. Gordus.** 656
Bulletin board demonstration on humidity, A (TD). **Kurt Smith; Sally Solomon.** 1039
Business students using the issues-directed approach, College chemistry for. **David L. Adams.** 483

C

Caffeine, Column chromatography: Isolation of. **Douglass F. Taber; R. Scott Hoerrner.** 73
Calcium? Principles and applications in bioinorganic chemistry-IV, Why. **Ei-Ichiro Ochiai.** 10
Calorimeter for reaction-solution experiments, A low-cost labyrinth. **Luis Alfonso Torres-Gomez; Aaron Rojas-Aquilar.** 671
Calorimeter, Measuring the heat of sublimation of dry ice with a polystyrene foam cup. **Albert W. Burgstahler; Clark E. Bricker.** 332
Calorimetry apparatus for undergraduate teaching, Solution. **Stephen W. Bigger; Geoffrey A. Meilak; Bruce Verity.** 528
Camphor, A mild and convenient oxidation of alcohols: Benzoin to benzil and borneol to. **Thomas S. Straub.** 1048
Capstone experience in chemistry, A. **Jeffrey Kovac.** 907
Carbon–carbon bond length from the absorption spectra of cyanine dyes, Determination of. **Richard S. Moog.** 506
Carbon dioxide, An oldie but goodie test for. **Al Hazari.** 778
Carbonate project introducing students to the chemistry lab, A. **Emily Dudek.** 948
Carbonyl compound using baker's yeast: An undergraduate laboratory synthesis of ferrocenylmethanol, Reduction of a. **Richard E. Bozak; Michael E. Prater; Ronald J. Hicks.** 427
Carbonyl–metal complex: Inorganic–organometallic laboratory experiment for advanced undergraduates, Chelate-assisted carbon–halogen bond cleavage by oxidative addition at a W(0). **Brett Lucht; Mitchell J. Poss; Thomas G. Richmond.** 786
Career preparation for industrial chemists, The doctor of chemistry program: (COOP). **Lynn A. Melton.** 142
Careers in chemical information workshop, A. **Bruce Slutsky.** 43

Microcomputer automation of volumetric titration. **W. C. Mak; R. S. Tse.** A95
Quantum mechanics with a spreadsheet. **Frank Rioux.** A282
Return on investment. **Justin W. Diehl; Larry M. Wier.** A42
Simulation of single-step chronoamperometry via spreadsheet. **Hal Van Ryswyk.** A283
Software simulations of Fourier transform experiments. **Ron C. Estler.** A220
Spreadsheet calculations for X-ray powder diffraction patterns. **Jeffrey Rosenthal.** A285
Using MathCAD in chemistry calculations. **Zoran Zdravkovski.** A95

Computer science emphasis, A chemisty degree program with. **G. L. Breneman.** 832

Computer series, edited by James P. Birk

122. Normal coordinate calculations as a classroom computer project. **Arthur Barlow; Max Diem.** 35
123. Computer interfaced fast kinetics luminescence decay experiment. **R. M. Ballew; J. N. Demas; N. P. Ayala, M. Grubb; S. W. Snyder.** 222
123. Measuring the photodecay of lightsticks using the blocktronic interface. **John K. Estell.** 225
124. Approach to equilibrium: The wasp and beetle model: Statistical insight into how equilibrium is achieved and the stability of an equilibrium state. **Albert Chang; Russell D. Larsen.** 297

124. Detemination of concentrations of species whose absorption bands overlap extensively: An instrumental analysis laboratory experiment. **C. Cappas; N. Hoffman; J. Jones; S. Young.** 300
125. CHEMPROF: An intelligent tutor for general chemistry. **Arthur Eggert; Catherine Middlecamp; Elizabeth Kean.** 403
126. Bits and pieces, 46. 486
127. The use of the desktop molecular modeller software in the teaching of structural chemistry. **S. Aduldecha; P. Akhter; P. Field; P. Nagle; E. O'Sullivan; K. O'Connor; B. J. Hathaway.** 576
128. Computer-assisted molecular modelling for undergraduate organic chemistry students. **Vernon G. S. Box.** 662
128. Teaching chemistry with expert systems: Systematic chemical separation of cations in aqueous media. **M. S. Larrechi; F. X. Rius.** 659
129. A BASIC program for computing reactant combinations from approximate elemental analysis data. **Udayampalayam P. Senthikumar; Rajogopalan Vijayalakshmi; Ramasubbu Jeyaraman.** 773
130. Computer interfacing: A new look at acid–base titrations. **John R. Amend; Kathleen A. Tucker; Ronald P. Furstenau.** 857
131. Advanced titration plots using spreadsheet scripting. **James O. Currie, Jr.; Richard V. Whiteley, Jr.** 923
132. Modeling complex kinetics schemes: A computational experiment. **Roger S. Macomber; Ioannis Constantinides.** 985

Computer use

Computerized temperature measuring system using a commercial pH/ISE meter (MODLAB). A201
Interactive computer-video programs used in the process of chemistry teaching (CS). 490
Molecular modeling as an integral part of an advanced lab course (CS). 488
Monte Carlo simulations of polymer configurations, Comment on (LTE). 621
Numerical method to calculate equilibrium concentrations for single-equation systems, A (CS). 486
Report from the 11th Biennial Conference on Chemical Education. 715
Statistics, Small sample. 470
Study of some 2-chloro-2-methylpropane kinetics using a computer interface, A. 609
Two-dimensional atomic and molecular orbital displays using mathematica (CS). 487
Voltammetry experiment by digital simulation (CS). 489

Computing overlaps between nonorthogonal orbitals. **Carl W. David.** 129
Conceptions and competence concerning quantitative relationships between variables, Student. **Mailoo Selvaratnam; Sudath Kumarasinghe.** 370
Conceptual knowledge of beginning chemistry graduate students, I have found you an argument: The. **George M. Bodner.** 385
Condenser for reflux operations in a drybox, A simple and inexpensive. **James C. Stevens.** 77
Conductivity demonstration, A low-cost, portable, and safe apparatus for lecture hall. **Gary D. Mercer.** 619
Conductivity experiments, An inexpensive device for quantitative. **John W. Havrilla.** 80
Conductivity of solutions, A safe and inexpensive device to show the. **Rubin Battino.** 79
Conductivity, Using a motor to demonstrate (OP). **Sally Solomon; Annamaria Fulep-Poszmik.** 160
Conductometry: Another perspective, Teaching. **Maarten C. A. Donkersloot.** 136
Connectionism (ER). **David Fowler; David W. Brooks.** 748
Consumer products, A sensual separation science experiment: Solvent extraction and chromatographic separation of menthol utilizing various. **Kenneth G. Furton; Maria I. Perez.** 946
Context on the translation of sentences into algebraic equations, The effect of. **Mansoor Niaz; J. Dudley Herron; Amy J. Phelps.** 306
Conundrums of chemical nomenclature, Some. **Michael N. Quigley.** 1009

Cooperative education, edited by Geoffrey Davies and Alan McClelland

The doctor of chemistry program: Career preparation for industrial chemists. **Lynn A. Melton.** 142

Cooperative learning in the undergraduate laboratory. **Mark E. Smith; C. C. Hinckley; G. L. Volk.** 413
Coordinate calculations as a classroom computer project, Normal (CS). **Arthur Barlow; Max Diem.** 35
Copper and iron atoms, Determining the relative masses of (F&R). **Bernal A. Kiser, Jr.** 250
Copper(I)–Copper(II) equilibria, Redox demonstrations and descriptive chemistry: Part 3. (TD). **Charles E. Ophardt.** 248
Copper, In praise of. **R. J. Tykodi.** 106
Copper precipitation in the human body: Wilson's disease. **R. P. Csintalan; N. M. Senozan.** 365
Corporation lab: How to do a lab with 32 students in A.P. chemistry, The (INS). **Otto Phanstiel.** 55
Corrosion inhibitors: Use of the hard and soft acid–base (HSAB) theory, Design of. **Frederick H. Walters.** 29
Corrosion phenomena: Part II. Corrosion phenomena of steel in aqueous media, Experimental demonstration of. **Elsa M. Arce; Roman Ramirez; Felipe Cortes; Jorge G. Ibanez.** 351
Corrosion phenomena: The corrosion, passivation, and pitting of iron in aqueous media, Experimental demonstration of. **Omar Solorza; Lucrecia Olivares; Jorge G. Ibanez.** 175
CPT flexible curricula, Inorganic chemistry and the new. **John G. Verkade.** 911
Crackers: A palatable approach to optical isomerism, Chiral. **Susan F. Griffin.** 1029
Critical point and the number of degrees of freedom, The. **Rubin Battino.** 276
Crystal structures, A demonstration of hexagonal close-packed and cubic close-packed (OP). **John D. Foote; Harvey F. Blanck.** 777

Crystallography

Closest packing of spheres from layers that are not close-packed. 895
How the search for a single error led to reexamination of the work of five Nobel Laureates and revised values for certain fundamental constants. 273
Spreadsheet calculations for X-ray powder diffraction patterns (BULLETIN). A285
X-ray diffraction pattern simulator, On an (LTE). 969

Cuboctahedron, Paper model of a (LTE). **Shukichi Yamana.** 623
Cuboctahedron, Paper model of a (LTE). **V. D. Kelkar.** 622
Current Contents on Diskette and interlibrary loan requests, How to save time with (BULLETIN). **Ernest C. McGoran.** A226

Curriculum

Adhesive technology and applications: A course that applies chemistry to real-world problems. 1012
Are we teaching the right things in general chemistry? 914
Business students using the issues-directed approach, College chemistry for. 483
Capstone course in culture and history of chemistry. 907
Careers in chemical information workshop. 43
Chemical information retrieval, Alternative approaches to teaching. 757
Chemistry doctorates awarded to women in the United States. 545
Chemists visit kids (CK). 855
Conceptual knowledge of beginning chemistry graduate students, I have found you an argument: The. 385
Degree program with computer science emphasis, A chemisty. 832
Design-oriented laboratory course in scientific measurement. 1005
Designing one course for both majors and nonmajors. 551
Development of an undergraduate biochemistry laboratory course with NSF–CSIP support. 46
Do the students think we are running the general chemistry laboratories better? 152
Doctor of chemistry program: Career preparation for industrial chemists (COOP). 142
Dropouts, Another option for chemistry. 762
Graduate school, The surprises of. 211
Health faculty to chemistry faculty, Advice from Allied. 763
In-class writing in general chemistry: A tool for increasing comprehension and communication. 148
Inorganic chemistry and the new CPT flexible curricula. 911
Insights on the teaching of American college chemistry 160 years ago. 186
Keeping a balance in the first analytical course: What should it cover? 838
Laboratory and lecture in general chemistry, Unifying (PO). 862
Laboratory-centered approach to teaching general chemistry. 228
Literacy, Achieving chemical. 392
Matching laboratory learning goals to evaluation of student performance: A standards-based approach. 590
Microscale laboratory at the high school level: Time efficiency and student response. 869
Molecular mechanics in the undergraduate curriculum. 816
Organometallic chemistry: A course designed for sophomore chemistry students. 16
Problem-solving approach to teaching organic laboratory, A. 503
Puzzle-oriented organic laboratory, The. 232
Radical proposal, A modest (VIEW). 770
Real life samples for unknowns in analytical chemistry, The use of. 598
Report from the 11th Biennial Conference on Chemical Education. 715
Report on the WPI Conference: "New practical examples for general chemistry." 381
Report on WPI–NEACT conference: "General chemistry; Approaching the 21st century." H. Beall. 835
Research program for community college students, A collaborative summer. 904
Safety instruction, A novel approach to chemical. 498
Scholarship and chemistry teaching in the two-year college. 145
Science and the environment. 1021
Science information retrieval. 562
Short course to encourage students to attend graduate school. 383
Teaching writing in college chemistry: A practical bibliography 1980–1990. 494

Technical Assistance Program offers intern experience in industrial waste reduction, The Minnesota. 499
Undergraduate research program, The evolution of a viable. 647
Undergraduate research, An alternate approach to teaching. 839
What do instructors expect from beginning chemistry students? 116
What is wrong with the general chemistry course? 192
Women chemists, A reentry program for. 544

Cyanine dyes, Determination of carbon–carbon bond length from the absorption spectra of. **Richard S. Moog.** 506
Cyclohexane and related structures, A projection for bond location in chair. **A. A. Woolf.** 646

D

Data for instruction in statistical methods, Reproducible bad. **Thomas H. Richardson.** 310
Databases and the laboratory computer, Chemical (BULLETIN). **Harold M. Bell; Kevin Harrington; Jungun Lee.** A99
Degassing samples, A rapid method for. Randy Shaver; Shawn Van Wallendael; D. Paul Rillema. 604
Degeneracies in separable systems with O_h symmetry. **C. A. Hollingsworth.** 23
Degree program with computer science emphasis, A chemisty. **G. L. Breneman.** 832
Degrees of freedom, The critical point and the number of. **Rubin Battino.** 276
Delocalization and relocalization to write Lewis structures, Lone electron motion. **Ernest C. McGoran.** 19
Demonstrations, experiments, and resources: A reference list for elementary through college teachers emphasizing chemistry with some physics and life science, Science. **David A. Katz.** 235
Demonstrations, The science and art of. **Thomas O'Brien.** 933
Densimeter, An analytical balance as tensiometer and (F&R). **Manuel Sanchez-Rubio; Jose R. Castellanos-Ortega; Jorge E. Puig.** 158
Densities and miscibilities of liquids and liquid mixtures (TD). **David A. Franz.** 594
Density gradients, A reliable, fast, and inexpensive method of preparing sucrose. **Paul M. Taslimi; Demetre Kolokotronis.** 58
Derivation of the Heller–McConnell equation, Simple. **Sheng Dai.** 894
Descriptive chemistry, Please! Revisit (LTE). **Michael Laing.** 270
Desktop molecular modeller software in the teaching of structural chemistry, The use of the (CS). **S. Aduldecha; P. Akhter; P. Field; P. Nagle; E. O'Sullivan; K. O'Connor; B. J. Hathaway.** 576
Detergents containing anionic surfactants as column packings, Polarity and selectivity of ionic stationary phases used in gas chromatography: Evaluation of commercial. **Kenneth G. Furton; Adriana Mantilla.** 74
Detonation of a mixture of two odd electron gases, Spontaneous (TD). **Thomas S. Briggs.** 938
Developmental instruction: Part II. Application of the Perry model to general chemistry. **David C. Finster.** 752
Device for quantitative conductivity experiments, An inexpensive. **John W. Havrilla.** 80
Device to show the conductivity of solutions, A safe and inexpensive. **Rubin Battino.** 79
Diasteriospecific synthesis of *cis*- and *trans*-2,3-dimethyl-1,4-thiamorpholines: An advanced organic sythesis and NMR project. **Maria Teresa Gallego; Ernesto Brunet; Jose Luis Garcia Ruano; Ernest L. Eliel.** 517
Diatomic molecules: The effect of s-p mixing, The relative energies of molecular orbitals for second-row homonuclear. **Albert Haim.** 737
Diazenido and hydrazido complexes of molybdenum, The synthesis of some. **J. R. Dilworth; J. R. Miller.** 788
Didactic application to riboflavin HPLC analysis: A laboratory experiment. **Marina Munari; Maria Miurin; Ginafranco Goi.** 78
Diels–Alder adduct: An organic chemistry experiment utilizing NMR spectroscopy to assign endo stereochemistry, Synthesis of a bicyclo[2.2.1]heptene. **Ernest A. Harrison, Jr.** 426
Diels–Alder reaction, A laboratory study of 1,3-dipole-dipolarophile addition: An extension of the. **Henry L. Gingrich; Miles Pickering.** 614
Dietary fat and health: An experiment on the determination of iodine number of fats and oils by coulometric titration. **Gene E. Kalbus; Van T. Lieu.** 64
Diffraction experiments in introductory courses, The optical transform: Simulating. **George C. Lisensky; Thomas F. Kelly; Donald R. Neu; Arthur B. Ellis.** 91
Diffraction of a laser light by a memory chip (TD). **Kamil Klier; J. Ashley Taylor.** 155
Diffraction patterns, Spreadsheet calculations for X-ray powder (BULLETIN). **Jeffrey Rosenthal.** A285
Diffraction with a He–Ne laser and an ordered suspension of charged microspheres, Direct visualization of Bragg. **Bertrand H. Spencer; Richard N. Zare.** 97
Digital simulation, A voltammetry experiment by (CS). **Gaspar Sanchez; Guillermo Codina; Antonio Aldaz.** 489
Dimensions of logarithmic quantities: Implications for the "hidden" concentration and pressure units in pH values, acidity constants, standard thermodynamic functions, and standard electrode potentials, The. **Philip Molyneux.** 467
Dimethyl maleate to dimethyl fumarate: An undergraduate experiment illustrating amine-catalyzed alkene isomerization, stereochemical principles, sublimation, and product identification by spectroscopic methods, Isomerization of. **Craig B. Fryhle; Carol M. Rybak; Kenneth E. Pulley.** 1050
Disco analogy, The (AA). **Rubin Battino.** 285
Discovery chemistry: A laboratory-centered approach to teaching general chemistry. **Robert W. Ricci; Mauri A. Ditzler.** 228
Discrepancy of language, A (LTE). **R. Thomas Myers.** 444
Distillation columns, A simple method for producing efficient concentric tube. **Sherrel Smith.** 616
Diverse nature of the C_6H_6 molecule, The. **J. H. Potgieter.** 280
DNA, Field inversion agarose gel electrophoresis of. **David L. Weller; Peter A. Gariepy.** 81
Do the students think we are running the general chemistry laboratories better? **Mina G. Staskun; Robert A. Russell; James O. Glanville.** 152
Doctorates awarded to women in the United States: A historical perspective, Chemistry. **Kenneth G. Everett; Will S. DeLoach.** 545
Double decay experiment: Half-life determination in a mixture of two independently decaying radionuclides, A. **I. Houdaverdis; S. S. Kontis.** 171
Drierite, Recycling. **James A. Green; Rudi W. Goetz.** 429
Drop counting as a volume measurement, An evaluation of (ML). **James Ealy; Miles Pickering.** A120
Dropouts, Another option for chemistry. **Donald Glover; Doris Kolb; Max Taylor.** 762
Drug design, Determining the conformation of a ligand bound to an enzyme: Application of NMR spectroscopy in. **David J. Craik; Kerry A. Higgins; Malea M. Kneen; Sharon L. A. Munro; Katherine J. Waterman.** 258
Drug Qinghaosu, A facile semisynthesis of the antimalarial. **Ronald J. Roth; Nancy Acton.** 612
Dry ice in a grade school setting, Handling. **Tomas G. Berger B.; Edward K. Mellon; William D. Bare.** 868
Dry ice, Wet (F&R). **Robert Becker.** 782
Drying system, A fast. Richard S. Mitchell. 500
Dyeing, A microscale synthesis of indigo: Vat (ML). **James R. McKee; Murray Zanger.** A242
Dyes, Determination of carbon–carbon bond length from the absorption spectra of cyanine. **Richard S. Moog.** 506

Exam question exchange, edited by John J. Alexander

Exam question exchange. Finding largest common factors and simplest integer ratios: A useful analogy applicable to the Millikan oil drop experiment and for calculating empirical formulas. **Roger S. Macomber.** 42
A problem for buffer buffs. **J. Ramon Leis; M. Elena Pena; C. Herrero-Latorre.** 141

Examinations in the first course in college chemistry, The content of final. **Robert H. Goldsmith.** 638
Examinations, Comparison of two methods for scoring. **Charles E. Becker.** 309
Exams to teach chemistry more effectively, Using. **Randy Boehm; John L. Gland.** 455
Experimental demonstration of corrosion phenomena: The corrosion, passivation, and pitting of iron in aqueous media. **Omar Solorza; Lucrecia Olivares; Jorge G. Ibanez.** 175
Experimental design and optimization, Attaining optimal conditions: An advanced undergraduate experiment that introduces. **Hal Van Ryswyk; Gerald R. Van Hecke.** 878
Experimental parameters: A student project for quantitative analysis, Investigation of. **Donald L. Campbell.** 784
Expert systems: Systematic chemical separation of cations in aqueous media, Teaching chemistry with (CS). **M. S. Larrechi; F. X. Rius.** 659
Explosion danger: spray-drying of nickel nitrate-starch suspension, Warning! (LTE). **C. A. Crutchfield; Jim VanAckeren.** 620
Extra credit? So, what can I do for (VIEW). **Miriam R. White.** 395
Extractions, An alternative to halogenated solvents for halogen-halide (ST). **Steven C. Petrovic; George M. Bodner.** 509

F

Fabric softeners as phase transfer catalyst in organic synthesis. **Albert W. M. Lee; W. C. Yip.** 69
False claims-corrected (LTE). **John W. Dawson, Jr.** 444
Fat and health: An experiment on the determination of iodine number of fats and oils by coulometric titration, Dietary. **Gene E. Kalbus; Van T. Lieu.** 64
Fat, The development of olestra, a noncaloric substitute for (PROD). **R. J. Jandacek.** 476
Ferrocenylmethanol, Reduction of a carbonyl compound using baker's yeast: An undergraduate laboratory synthesis of. **Richard E. Bozak; Michael E. Prater; Ronald J. Hicks.** 427
Fertilizers, Acidity and basicity of (INS). **David R. Hershey.** 642
Fiber identification: An organic-polymer laboratory, Textile. **Robert L. Flachskam, Jr.; Nancy W. Flachskam.** 1044
Field inversion agarose gel electrophoresis of DNA. **David L. Weller; Peter A. Gariepy.** 81
Figures signify nothing, When. **Jamil Ahmad.** 469

Filtrates and residues, edited by James Schreck

An analytical balance as tensiometer and densimeter. **Manuel Sanchez-Rubio; Jose R. Castellanos-Ortega; Jorge E. Puig.** 158
Bright-line spectrum analogy. **Richard A. Samsa.** 412
Determining the relative masses of copper and iron atoms. **Bernal A. Kiser, Jr.** 250
Synthesis of an insoluble salt: A stoichiometry experiment. **Erling Anthony** 1040
The "bean lab": A simple introduction to equilibrium. **Paul D. Dickinson; Walt Erhardt.** 930
Wet dry ice. **Robert Becker.** 782

Filtration of protein precipitates, Reducing sample loss during the. **M. Saleemuddin.** 522
Finding largest common factors and simplest integer ratios: A useful analogy applicable to the Millikan oil drop experiment and for calculating empirical formulas (EQE). **Roger S. Macomber.** 42
First-order consecutive rate reaction. A different method for its solution, A simple (LTE). **Carlos Castillo S.; Germania Micolta S.** 179

First-order consecutive rate reaction. A different method for its solution, A simple (LTE). **Elvin Hughes, Jr.** 180
First-order kinetics, Assessing the validity of the unireactant lumped approximation in multireactant systems following. **F. Xavier Malcata.** 288
Fischer projection into a zigzag representation, An easy way to convert a. **Sandra Signorella; Luis F. Sala.** 105
Flame test procedures, Alternative. **Zexia K. Barnes.** 246
Flash chromatography, A pressure source for. **Josef G. Krause.** 790
Flow-injection spectrophotometric experiment: A laboratory exercise, Reaction kinetics in a. **Joaquim A. Nobrega; Antonio A. Mozeto; Rosana M. Alberici.** 966
Fluorescence induction, Instrumentation for measuring in vivo chlorophyll. **J. L. Wickliff; David E. Wickliff.** 963
Fluorescence spectroscopy for the undergraduate instrumental chemistry course, Experiments in synchronous. **Colleen M. Byron; T. C. Werner.** 433
Fluorocarbon bubbler fluids for reactive gases (ML). **Alan B. Brown; J. W. Kosmeder; Paul D. Gaska; Chris W. Chronister; Luis P. Barthel-Rosa.** A298
Forensic examination of pen inks, A chemistry whodunit: **Michael N. Quigley; Hongyan Qi.** 596
Forensic laboratory experiment: Who shot J.R.?, A. **Darwin B. Dahl; Peter F. Lott.** 1025
Formaldehyde clock salutes for schools with colors of gold and green or gold and red, Some modified two-color (TD). **John J. Fortman; Jeffrey A. Schreier.** 324
Fourier transform experiments, Software simulations of (BULLETIN). **Ron C. Estler.** A220
Fourier transform in X-ray and electron scattering of hydrogenlike atoms, The. **Jeffrey A. Foley.** 889
Free radical halogenation of hydrocarbons: Experiments for organic chemistry using the small-scale aoproach (ML). **Helmuth M. Gilow.** A122
Freezing point depression in a bottle of soda (TD). **William D. Bare.** 1038

Acid and base dissociation constants of water and its associated ions. 304
Acid–base reactions, More about the extent of. 989
Acid rain investigations (OP). 1034
Acidity and basicity of fertilizers (INS). 642
Adding colors and sparkles to hydrogen balloon explosions (TD). 937,
Adding heart and soul to the chemistry classroom (VIEW). 999
Advanced titration plots using spreadsheet scripting (CS). 923
Alternative flame test procedures. 246
Altitude and boiling point (LTE). 622.
Ambiguous terms of science: Part 4: The return of ambiguous chemical terms. 1014
Ammonia bottle (TD). 247
Ammonia fountain in a micropipet, An (ML). A297
Analogy applicable to the Millikan oil drop experiment and for calculating empirical formulas (EQE). 42
Application of the Perry model to general chemistry. 752
Approach to equilibrium: The wasp and beetle model (CS). 297
Approach to improving communication skills in a laboratory setting: The use of writing consultants. 150
Are we teaching the right things in general chemistry? 914
Assign research papers in the elements (LTE). 711
Atomic weights, A simple laboratory experiment illustrating the relative nature of. 675
Aufbau mnemonics (LTE). 445
Aufbau rewritten. 396
Balance as tensiometer and densimeter, An analytical (F&R). 158
Bright-line spectrum analogy (F&R). 412
Bulletin board demonstration on humidity (TD). 1039
Calculating equilibrium concentrations by the continuation method. 40
Carbonate project introducing students to the chemistry lab, A. 948
Charles's law revisited. 1042
Chemical equilibrium (CP).
I. The thermodynamic equilibrium constant. 138
II. Deriving an exact equilibrium equation. 215
III. A few math tricks. 291
IV. Weak acids and bases. 397
V. Seeing an endpoint in acid–base titrations. 566
VI. Buffer solutions. 656
VII. pH approximations in acid–base titrations. 759
VIII. Precipitates. 927
Chemical language skills: Investigating the deficit. 389
CHEMPROF: An intelligent tutor for general chemistry (CS). 403
Closest packing of spheres from layers that are not close-packed. 895
Collecting and using the chemical elements. 991
Colorful layers and purple globs (TD). 666
Conceptions and competence concerning quantitative relationships between variables, Student. 370
Connectionism (ER). 748
Context on the translation of sentences into algebraic equations, The effect of. 306
Cooperative learning in the undergraduate laboratory. 413
Copper as a paradigm for teaching solution chemistry. 106
Counting beans to introduce equilibrium. 930
Demonstration illustrating the factors determining rates of chemical reactions. 501
Demonstrations of interfacial phenomena (OP). 592
Densities and miscibilities of liquids and liquid mixtures (TD). 594
Design of corrosion inhibitors: Use of the hard and soft acid–base (HSAB) theory. 29
Determining students' ability to transfer specific volumes of liquid. 941
Determining the relative masses of copper and iron atoms. 250
Device for quantitative conductivity experiments, An inexpensive. 80
Disco analogy to explain quantum theory. 285
Do the students think we are running the general chemistry laboratories better? 152
Dropouts, Another option for chemistry. 762
Effective homework assistance. 189
Elements, A divertimento on the symbols of the. 1011
Elements, Important. 732
Error, precision, and uncertainty (AA). 649
Examinations in the first course in college chemistry, The content of final. 638
Figures signify nothing, When. 469
Freezing point depression in a bottle of soda (TD). 1038
Freshman experience in qualitative organic analysis. 418
Gas law apparatus, Inexpensive. 667
Half-cell reactions: Do students ever see them? (TD). 247
Having fun with the metric system. 1043
Health faculty to chemistry faculty, Advice from Allied. 763
Heat of sublimation of dry ice with a polystyrene foam cup calorimeter, Measuring the. 332
How to get more from ionization energies in the teaching of atomic structure. 132
Hydronium ion: How do we know? The (INS). 568
In-class writing in general chemistry: A tool for increasing comprehension and communication. 148
Isotope separation. 312
Laboratory and lecture in general chemistry, Unifying (PO). 862
Laboratory-centered approach to teaching general chemistry. 228
Lewis structures, formal charge, and oxidation numbers: A more user-friendly approach. 456
Liquid systems with more than two immiscible phases. 655
Lone electron motion delocalization and relocalization to write Lewis structures. 19
Lost in the desert (AA). 114
Low-cost, portable, and safe apparatus for lecture hall conductivity demonstration. 619
Magnesium (USE). 196
Magnetic illustration of the VSEPR theory, A (OP). 861
Magnetic models of ions and water molecules for overhead projection (OP). 245
Magnetic two-dimensional analogue of VSEPR, A (OP). 861

Margarine means, Demonstrating what "light". 654
Micro-Kipp gas generators (ML). A297
Molar mass and acid constant for a weak acid, Determination of. 674
Must we continue to teach students to make cloth? (PO). 1010
News media to teach chemical principles, Using. 769
Nuclear reactions versus inorganic reactions: And the winner is ... (REACT). 819
"Old" new idea, An (LTE). 270
Periodic table according to chemistry or according to spectroscopy. 122
Pictures that show how chemistry and technology permeate our life. 652
Problem for buffer buffs (EQE). 141
Problems as effective vehicles for the presentation of general chemistry lectures, The use of "marathon". 919
Procedure for determining formulas for the simple p-block oxoacids. 1001
Quadratic equations to the correct number of significant figures, Solving. 409
Qualitative analysis of eleven household compounds. 328
Quantum shoe store and electron structure, The (AA). 837
Reactivity of nickel (REACT). 48
Redox demonstrations and descriptive chemistry: Part 3. Copper(I)–Copper(II) equilibria (TD). 248
Report from the 11th Biennial Conference on Chemical Education. 715
Report on the WPI Conference: "New practical examples for genral chemistry." 381
Report on WPI–NEACT conference: "General chemistry; Approaching the 21st century." 835
Reusable heat pack (TD). 780
Reversible blue-and-gold reaction (TD). 1037
Revisit descriptive chemistry, Please! (LTE). 270
SI mnemonic, An. 815
Silver from and some uses for waste silver chloride, Recovery of. 602
Simulating diffraction experiments in introductory courses. 91
Spontaneous detonation of a mixture of two odd electron gases (TD). 938
St. Patrick's day special—a boron flame shamrock (TD). 57
Stoichiometry experiment (F&R). 1040
Sulfur dioxide, Demonstration properties of (TD). 417
Synthesis, oxidation and UV/IR spectroscopy illustrated: An integrated freshman lab session (MODLAB). A274
System for rounding numbers, A new. 818
Taxonomy of relationships among the elements, A. 828
Teaching students to convert temperature. 400
Test for carbon dioxide, An oldie but goodie. 778
Thermochromic behavior of cobalt(II) halides in nonaqueous solvents and on filter paper (TD). 779
Thermodynamic irreversibility—What is it? 31
Titrimetric determination using laser-beam scattering for endpoint determination (TD). 155
Use of liquid oxygen to support combustion (TD). 1036
Using a motor to demonstrate conductivity (OP). 160
Voltaic pile: A stimulating general chemistry experiment, The (TD). 665
Water leveling device for gas law experiments, An inexpensive. 673
What do instructors expect from beginning chemistry students? 116
What is wrong with the general chemistry course? 192

Giant molecules in solid state chemistry: Using niobium trisulfide as an example. **Eric Sandre; Annie LeBlanc; Michel Danot.** 809
Glass and glassmaking (PROD). **Gerald J. Fine.** 765
Glass electrodes, An application of nonfunctional. **Tessa Brandt; Denise Barnes; Brad Messer; Kurt Johnson; Stephen Lawrence.** 669
Glove box, Blowing up balloons and trash bags in a. **Gerald C. Roper; Gabor Kiss; Shakti L. Mukerjee; Carl D. Hoff.** 508
Glucose 6-phosphate dehydrogenase deficiency: An inherited ailment that affects 100 million people. **N. M. Senozan; C. A Thielman.** 7
Glucose, NMR and the structure of D- (TF). **Jerome E. Gurst.** 1003
Gordon Research Conference on science education, First. 901
Grade school setting, Handling dry ice in a. **Tomas G. Berger B.; Edward K. Mellon; William D. Bare.** 868
Grades to absent students-revisited, Assigning. **John F. Beck; J. Christopher Beck.** 319
Grading to reward accumulated knowledge. **R. Daniel Bishop, Jr.** 492
Graduate programs, Prediction of success in chemistry. **James Ealy; Miles Pickering.** 118
Graduate school, The surprises of. **Douglas J. Sawyer.** 211
Graduate students, I have found you an argument: The conceptual knowledge of beginning chemistry. **George M. Bodner.** 385
Graphite: A chemist's introduction to band theory, The electronic structure of. **Alejandro Pisanty.** 804
Green's *Chemical Philosophy*: Insights on the teaching of American college chemistry 160 years ago, Jacob. **David W. Kurtz.** 186
Grignard reagent, A puzzle-solving experiment utilizing a. **Ernest F. Silversmith.** 688
Group I, More efficient removal of Pb(II) from Ag(I) and Hg(I) in. **L. H. Holmes, Jr.** 943

H

Half-cell reactions: Do students ever see them? (TD). **Joseph D. Ciparick.** 247
Half-life of barium-137 and gallium-68 radioactive isotopes: A spreadsheet application, A cumulative count method for determining the (BULLETIN). **Elvin Hughes, Jr.** A41
Halogen extraction solvent, The suitability of mineral oil as a. **Thomas M. Scott.** 950
Halogen waters, The preparation of (INS). **Damon Diemente.** 932
Halogenated solvents for halogen-halide extractions, An alternative to (ST). **Steven C. Petrovic; George M. Bodner.** 509
Harmonic oscillator to introduce Rayleigh–Schrodinger perturbation theory, Using the perturbed. **Karl Sohlberg; David Shreiner.** 203
Having fun with the metric system. **Mark L. Campbell.** 1043
Hazardous silver compounds, On (SAFETY). **John L. Ennis; Edward S. Shanley.** A6
Hazardous students (LTE). **R. A. Hoots.** 883
Hazardous wastes, A short qualitative analysis scheme without. **John T. Petty.** 942
Health: An experiment on the determination of iodine number of fats and oils by coulometric titration, Dietary fat and. **Gene E. Kalbus; Van T. Lieu.** 64
Health faculty to chemistry faculty, Advice from Allied. **David F. Dever.** 763
Heat engines: The possible misinterpretation of a corollary to Carnot's theorem, The efficiency of reversible (TF). **Kurt Seidman; Thomas R. Michalik.** 208
Heat of sublimation of dry ice with a polystyrene foam cup calorimeter, Measuring the. **Albert W. Burgstahler; Clark E. Bricker.** 332
Heat pack, The reusable (TD). **Lyle V. McAfee; Charles F. Jumper.** 780
Heller–McConnell equation, Simple derivation of the. **Sheng Dai.** 894
Heterogeneous catalysis, An experiment on. **Juan Bussi; Carlos Correa; Juan A. Coch Frugoni.** 170
Heterogeneous catalysis, Experiments illustrating. **Maria A. Martin Luengo; Paul A. Sermon.** 251
Hexagonal close-packed and cubic close-packed crystal structures, A demonstration of (OP). **John D. Foote; Harvey F. Blanck.** 777
High school chemistry (LTE). **William G. Lamb.** 968
High school chemistry safety survey. **Edward G. Senkbeil.** 410

Isometric structures, Representing. Edwin Thall. 190
Isotope separation. **William Spindel; Takanobu Ishida.** 312
Issues-directed approach, College chemistry for business students using the. **David L. Adams.** 483

J

Jam bottle or qualitative TLC tank, Empty. **Saqib Ali; M. Mazhar.** 593
Jeopardy: An alternative group meeting, Chemical. **David Scarpetti.** 1027
Job!, So you want a. **George Schwartzman.** 940

K

Keeping a balance in the first analytical course: What should it cover? **Byron Kratochvil.** 838
Kekule festivities, Hofmann's benzene tree at the. **William H. Brock; O. Theodor Benfey; Susanne Stark.** 887
Kerrich's method for $y = \alpha x$ data when both y and x are uncertain. **A. H. Kalantar.** 368
Ketals of 9-fluorenone: Advanced organic laboratory exercise in synthesis and stereochemical analysis using 13C NMR, Cyclic. **Paul R. Rabien; Mark A. Deuber; Ai Ching Lim; Robert M. Dickson; Claude E. Wintner.** 796
Ketone derivative, A novel. **Dan Melamed; Miles Pickering.** 1046
Kids, Chemists visit (CK). **Christine M. Pharr; M. Robert Stoner.** 855

Kinetics

Analyzing first-order kinetics (LTE). 710
Assessing the validity of the unireactant lumped approximation in multireactant systems following first-order kinetics. 288
Belousov–Zhabotinsky reagents, Recipes for. 320
Coagulation kinetics: A laboratory experiment. 523
Computer interfaced fast kinetics luminescence decay experiment (CS). 222
Demonstration illustrating the factors determining rates of chemical reactions. 501
Experiment on heterogeneous catalysis. 170
First-order consecutive rate reaction. A different method for its solution, A simple (LTE). 179
Flow-injection spectrophotometric experiment: A laboratory exercise, Reaction kinetics in a. 966
Measuring the photodecay of lightsticks using the blocktronic interface (CS). 225
Mechanistic interpretation of pH–rate profiles. 973
Modeling complex kinetics schemes: A computational experiment (CS). 985
Pentaamminenitritocobalt(III) to pentaamminenitrocobalt(III) linkage isomerization revisited"—A correction, "Kinetics of. 903
Provocative opinions on the terminology of chemical kinetics, Some (TF). 728
Reactant fluxes in the steady state. 897
Some modified two-color formaldehyde clock salutes for schools with colors of gold and green or gold and red (TD). 324
Sorption of liquids by polymer films: A simple laboratory experiment, Kinetic and thermodynamic study on the. 343
Spectroelectrochemical demonstration of a modified Belousov–Zhabotinskii reaction, A. 794
Study of some 2-chloro-2-methylpropane kinetics using a computer interface, A. 609.
Undergraduate laboratory experiment using infrared absorptions to monitor decomposition rates. 510

L

La Bel's theory in the 1875 development of the van't Hoff theory, The influence of (LTE). **Leonello Paoloni.** 797
Labeling of a protein: An experiment in protein technology, Covalent. **Alexander J. Anderson.** 521
Laboratories better? Do the students think we are running the general chemistry. **Mina G. Staskun; Robert A. Russell; James O. Glanville.** 152
Laboratory, A problem-solving approach to teaching organic. **James H. Cooley.** 503
Laboratory and lecture in general chemistry, Unifying (PO). **David K. Erwin.** 862
Laboratory-centered approach to teaching general chemistry, Discovery chemistry: A. **Robert W. Ricci; Mauri A. Ditzler.** 228
Laboratory computer, Chemical databases and the (BULLETIN). **Harold M. Bell; Kevin Harrington; Jungun Lee.** A99
Laboratory course in scientific measuring, The development of statistical concepts in a design-oriented. **Martin J. Goedhart; Adri H. Verdonk.** 1005
Laboratory course with NSF–CSIP support, Development of an undergraduate biochemistry. **Sybil K. Burgess.** 46

Laboratory experiments

Acid rain experiment and construction of a simple turbidity meter. 254
Acid/base indicators: A first experiment for the quantitative analysis laboratory, Statistical evaluation of. 329

Adsorption of methylene blue on activated carbon: An experiment illustrating both the Langmuir and Freundlich isotherms. 349
Alkaloids: Isolation and purification. 700
Ammonia fountain in a micropipet, An (ML). A297
Analysis of artificial sweeteners and additives in beverages by HPLC: An undergraduate experiment (MODLAB). A195
Atomic weights, A simple laboratory experiment illustrating the relative nature of. 675
Base unknowns in the introductory analytical chemistry lab, Multifunctional. 600
Basic cloning experiment for the undergraduate biochemistry lab. 707
Belousov–Zhabotinsky reagents, Recipes for. 320
Benzoylacetic acid: Synthesis and examination of the tautomeric equilibrium. 66
Binding of Coomassie Brilliant Blue to bovine serum albumen: A physical biochemistry experiment. 262
Bromination using *N*-bromosuccinimide: A simple introductory organic chemistry experiment. 253
Carbonate project introducing students to the chemistry lab, A. 948
Catalytic hydrogenation of methyl oleate by in-situ hydrogenation, The (LTE). 358
Charles's law revisited. 1042
Chelate-assisted carbon–halogen bond cleavage by oxidative addition at a W(0) carbonyl–metal complex. 786
Chloride in natural waters: An environmental application of a potentiometric titration. 334
Coagulation kinetics: A laboratory experiment. 523
Column chromatography isolate caffeine. 73
Comparing intermolecular forces of functional groups via thin-layer chromatography. 428
Computer interfaced fast kinetics luminescence decay experiment (CS). 222
Computer interfacing: A new look at acid–base titrations (CS). 857
Computerized temperature measuring system using a commercial pH/ISE meter (MODLAB). A201
Cooperative learning in the undergraduate laboratory. 413
Corrosion, passivation, and pitting of iron in aqueous media. 175
Corrosion phenomena of steel in aqueous media. 351
Counting beans to introduce equilibrium. 930
Covalent labeling of a protein. 521
Demonstration of anti-Markovnikov addition to alkenes, A quick and effective. 785
Detemination of concentrations of species whose absorption bands overlap extensively: An instrumental analysis laboratory experiment (CS). 300
Determining optimum spectral bandwidth: An instrumental methods laboratory exercise (MODLAB). A278
Determining the conformation of a ligand bound to an enzyme. 258
Determining the formula of a complex ion. 530
Determining the relative masses of copper and iron atoms. 250
Device for quantitative conductivity experiments, An inexpensive. 80
Diasteriospecific synthesis of *cis*- and *trans*-2,3-dimethyl-1,4-thiamorpholines: An advanced organic sythesis and NMR project. 517
Discovering stereoselectivity: Synthesis of exo- and endobrevicomin using a tunable hydride reduction. 951
Elimination of 2,3-dibomo-3-phenylpropanoic acid to *E* or *Z* 1-bromo-2-phenylethylene (βD-bromostyrene): An experiment illustrating solvent effect on the thermochemical course of a reaction, Decarboxylative. 515
Evaluation of commercial detergents containing anionic surfactants as column packings. 74
Evaluation of drop counting as a volume measurement (ML). A120
Experiment on heterogeneous catalysis. 170
Experiment on the determination of iodine number of fats and oils by coulometric titration. 64
Experiment that introduces experimental design and optimization, Attaining optimal conditions: An advanced undergraduate. 878
Experiments in synchronous fluorescence spectroscopy for the undergraduate instrumental chemistry course. 433
Extraction and identification of monoterpenes. 267
Fabric softeners as phase transfer catalyst in organic synthesis. 69
Facile semisynthesis of the antimalarial drug Qinghaosu. 612.
Field inversion agarose gel electrophoresis of DNA. 81
Flow-injection spectrophotometric experiment: A laboratory exercise, Reaction kinetics in a. 966
Forensic examination of pen inks. 596
Forensic laboratory experiment: Who shot J.R.? 1025
Freshman experience in qualitative organic analysis. 418
Grignard reagent, A puzzle-solving experiment utilizing a. 688
Group I, More efficient removal of Pb(II) from Ag(I) and Hg(I) in. 943
Half-life determination in a mixture of two independently decaying radionuclides. 171
Heat of sublimation of dry ice with a polystyrene foam cup calorimeter, Measuring the. 332
How to do a lab with 32 students in A.P. chemistry (INS). 55
HPLC mapping of protease digestion products: A biochemistry laboratory experiment, Insulin: 958
Instrumentation for measuring in vivo chlorophyll fluorescence induction. 963
Interactive computer-video programs used in the process of chemistry teaching (CS). 490
Investigation of experimental parameters. 784
Ionophoresis. 178
Ketone derivative, A novel. 1046
Laboratory study of 1,3-dipole-dipolarophile addition. 614
LeChatelier principle, A simple, experimental illustration of the. 944
Ligand binding constants for iron porphyrins by cyclic voltammetry, The determination of axial. 337
Ligand effects on the spin state and electrochemistry of iron porphyrins: An advanced laboratory experiment, Axial. 340
Lucas test, A study of the. 704
Malonic ester synthesis in the undergraduate laboratory, The. 689
Measuring pressures through the Apple IIe game port (BULLETIN). A224
Measuring the photodecay of lightsticks using the blocktronic interface (CS). 225
Method of preparing sucrose density gradients. 58
Microscale experiment that displays regio- and stereochemistry using NMR spectroscopy and molecular mechanics calculations. 693
Microscale free radical halogenation of hydrocarbons (ML). A122
Microscale resolution of racemic 1-phenylethylamine and chiral high performance liquid chromatography (HPLC) in undergraduate chemistry (ML). A176
Microscale synthesis of indigo: Vat dyeing (ML). A242
Microscopic protonation constants of *N,N*-dimethyl-1,3-propanediamine. 791
Molar mass and acid constant for a weak acid, Determination of. 674
Molecular modeling as an integral part of an advanced lab course (CS). 488
Molecular paramagnetic resonance of gas-phase nitric oxide. 421
NMR study of the stereochemistry of the fumarase-catalyzed hydration of fumaric acid, An. 436
Optimization of HPLC and GC separations using response surfaces. 162
Organic chemistry experiment utilizing NMR spectroscopy to assign endo stereochemistry. 426
Organic electrosynthesis without a potentiostat. 513
Organic unknowns that students prepare themselves. 378
Oxidation of alcohols: Benzoin to benzil and borneol to camphor. 1048
Peptide HPLC experiment for biochemistry laboratory. 72
Preparation and characterization of an X-type zeolite: An experiment in solid-state chemistry, The. 875
Preparation and characterization of iron sandwich complexes. 607
Preparation and characterization of two nickel(II) complexes: An inorganic chemistry experiment. 336
Preparation and testing of a fused-silica gas chromatography capillary column: An experiment for a senior undergraduate laboratory module (MODLAB). A249
Preparation of 1,4-di-*tert*-butylbenzene without $AlCl_3$: An undergraduate organic chemistry experiment, A simple. 793
Preparation of semiconducting materials in the laboratory. 872
Project in macrocyclic coordination chemistry utilizing a range of physical techniques. 59
Purification of glucose-6-phosphate dehydrogenase by ion-exchange chromatography, Versatile partial. 265
Qualitative analysis of eleven household compounds. 328
Qualitative analysis scheme without hazardous wastes, A short. 942
Quantitative determination of the amino acid composition of a protein using gas chromatography-mass spectrometry. 438
Rates of proton exchange of thiamine hydrochloride by ^1H NMR spectroscopy: A bioorganic experiment for the undergraduate laboratory, Determination of. 683
Reaction that demonstrates autocatalysis, reversibility, pseudo orders, chemical waves, and concentration jump, A (TD). 863
Real life samples for unknowns in analytical chemistry, The use of. 598
Reduction of a carbonyl compound using baker's yeast. 427
Reduction of acetylferrocene with lithium aluminum hydrid and resolution of the enantiomers with a chiral HPLC column: An experiment for the advanced undergraduate laboratory (MODLAB). A143
Rotating disk voltammetry experiment. 352
Separating or identifying plastics, Method for. 348
Separations utilizing gel filtration and ion-exchange chromatography. 168
Silver from and some uses for waste silver chloride, Recovery of. 602
Small-scale thermochemistry experiment (ML). A178
Software simulations of Fourier transform experiments (BULLETIN). A220
Solutions in the biochemistry lab: An essential, basic skill, Preparing. 1054
Solvent extraction and chromatographic separation of menthol utilizing various consumer products. 946
Sorption of liquids by polymer films: A simple laboratory experiment, Kinetic and thermodynamic study on the. 343
Spectroelectrochemical demonstration of a modified Belousov–Zhabotinskii reaction, A. 794
Standard solutions, Student preparations of. 505

Structure determination by NMR, Undergraduate organic and polymer lab experiments that exemplify. 685
Study of some 2-chloro-2-methylpropane kinetics using a computer interface, A. 609
Synergistic effects in binary solvent mixtures: A simple approach to a special case of nonideal binary mixture behavior. 347
Synthesis and characterization of dinuclear tungsten carbonyl anions. 678
Synthesis and spectroscopy of metal complexes, An undergraduate laboratory experiment involving. 681
Synthesis of an ant alarm pheromone. 71
Synthesis of an insoluble salt: A stoichiometry experiment (F&R). 1040
Synthesis of an isolable quinodimethane. 691
Synthesis of 2′-bromostyrene, The. 161
Synthesis of cobalt(III) sepulcrate from tris(ethylenediamine)cobalt(III) and its purification by ion-exchange chromatography: An experiment for the advanced undergraduate inorganic laboratory (MODLAB). A144
Synthesis of 2,6-dinitro-4-methylaniline from *p*-toluidine, The three-step. 682
Synthesis of 3,4-pentadien-1-ol from 3-Butyn-1-ol: Spectral analysis and unusual durability of the allene moiety. 256
Synthesis of photochromic materials used in sunglasses. 424
Synthesis of some diazenido and hydrazido complexes of molybdenum, The. 788
Synthesis of *trans*-2-*tert*-butylcyclohexanol via hydroboration: A microscale organic experiment demonstrating syn addition (ML). A297
Synthesis, oxidation and UV/IR spectroscopy illustrated: An integrated freshman lab session (MODLAB). A274
Synthetic applications of aromatic metabolites. 698
Textile fiber identification. 1044
Thermal decomposition of diacyl peroxides and peresters. 510
Titration of chromate–dichromate mixtures: A new experiment for quantitative analysis. 677
Toxicity using bacteria: An undergraduate laboratory experiment, Testing for chemical. 695
Transition metal complexes with 1,4,7-trithiacyclononane. 605
Undergraduate experiment illustrating amine-catalyzed alkene isomerization, stereochemical principles, sublimation, and product identification by spectroscopic methods. 1050
Wet dry ice (F&R). 782
Wittig synthesis of alkenes by phase-transfer catalysis (ML). A58

Laboratory learning goals to evaluation of student performance: A standards-based approach, Matching. **Warren Beasley.** 590
Laboratory setting: The use of writing consultants, An approach to improving communication skills in a. **Ronald A. Bailey; Cheryl Geisler.** 150
Laboratory skills test: Determining students' ability to transfer specific volumes of liquid, A. **Richard S. Mitchell.** 941
Laboratory system for the qualitative analysis of selected metal cations, A flexible automated (TICI). **James F. Blankenship; Steven Costello; Matthew Sprouse; Frank A. Settle, Jr.; Rosina H. Bolen; Michael A. Pleva.** A65
Laboratory, The puzzle-oriented organic. **Miles Pickering.** 232
Labyrinth calorimeter for reaction-solution experiments, A low-cost. **Luis Alfonso Torres-Gomez; Aaron Rojas-Aquilar.** 671
Langmuir and Freundlich isotherms, Adsorption of methylene blue on activated carbon: An experiment illustrating both the. **J. H. Potgieter.** 349
Language skills: Investigating the deficit, Chemical. **Keith Ver Beek; Larry Louters.** 389
Laser light by a memory chip, Diffraction of a (TD). **Kamil Klier; J. Ashley Taylor.** 155
Laser-beam scattering for endpoint determination, Titrimetric determination using (TD). **David W. Brooks; Edward J. Lyons.** 155
Laser photometer that is assembled in seconds, A. **Thomas A. Lehman; Steven W. Pauls.** 530
Lead—from the east or the west, The origin of white. **C. M. Wai; K. T. Liu.** 25
Learning chemistry: Intellectual integrity or mental servility. **Gordon M. Barrow.** 449
LeChatelier principle, A simple, experimental illustration of the. **Isabel M. Plaza del Pino; Jose M. Sanchez-Ruiz.** 944
LeChatelier process for the extraction of alumina, The (LTE). **Colin H. L. Kennard.** 270
LeChatelier process for the extraction of alumina, The (LTE). **George B. Kauffman.** 270

Lecture demonstrations

Also see entries under *Tested Demonstrations* and *Overhead Projector Demonstrations*

Collecting and using the chemical elements. 991
Demonstrations, The science and art of. 933
Direct visualization of Bragg diffraction with a He–Ne laser and an ordered suspension of charged microspheres. 97
Liquid systems with more than two immiscible phases. 655
Low-cost, portable, and safe apparatus for lecture hall conductivity demonstration. 619
Making colorful patterns on paper dyed with red cabbage juice (CK). 588
Margarine means, Demonstrating what "light". 654
Preparation of halogen waters for class demonstration (INS). 932
Reference list for elementary through college teachers emphasizing chemistry with some physics and life science. 235
Safe and inexpensive device to show the conductivity of solutions. 79
Safety shield from a plastic water jug, An inexpensive. 234
Simulating diffraction experiments in introductory courses. 91

Lecture in general chemistry, Unifying laboratory and (PO). **David K. Erwin.** 862
Lectures, The use of "marathon" problems as effective vehicles for the presentation of general chemistry. **James H. Burness.** 919
Legendre transformation and spreadsheets, The. **Carl W. David.** 893
Leveling device for gas law experiments, An inexpensive water. **John H. Bedenbaugh; Angela O. Bedenbaugh.** 673
Lewis structures, formal charge, and oxidation numbers: A more user-friendly approach. **John E. Packer; Sheila D. Woodgate.** 456
Lewis structures, Lone electron motion delocalization and relocalization to write. **Ernest C. McGoran.** 19
Ligand binding constants for iron porphyrins by cyclic voltammetry, The determination of axial. **David K. Geiger; Edmund J. Paviak; Lawrence T. Kass.** 337
Ligand bound to an enzyme: Application of NMR spectroscopy in drug design, Determining the conformation of a. **David J. Craik; Kerry A. Higgins; Malea M. Kneen; Sharon L. A. Munro; Katherine J. Waterman.** 258
Ligand effects on the spin state and electrochemistry of iron porphyrins: An advanced laboratory experiment, Axial. **David K. Geiger.** 340
Lighted stage for use in chemistry demonstrations, A (TD). **Bjorn Olesen; Lester L. Leaton.** 594
Lighting, Carl Auer von Welsbach and the development of incandescent gas. **John T. Stock.** 801
Lightsticks using the blocktronic interface, Measuring the photodecay of (CS). **John K. Estell.** 225
Linear chain magnetism. **Richard L. Carlin.** 361
Liquid chromatography (HPLC) in undergraduate chemistry. Microscale resolution of racemic 1-phenylethylamine and chiral high performance (ML). **Miroslav Krumpolc.** A176
Liquid level control device, An automated. **Leandro Victoria; Juan Ortega-Navas; Jose A. Ibanez.** 670
Liquid oxygen to support combustion, Use of (TD). **Dan M. Sullivan.** 1036
Liquid systems with more than two immiscible phases. **Jan Kochansky.** 655
Literacy, Achieving chemical. **Robert M. Hazen; James S. Trefil.** 392
Logarithmic diagram for the uranyl–carbonate–hydroxide complex equilibria, The. **Esma Tutem; Resat Apak; Mehmet Hulusi Turgut; Vildan Apak.** 569
Logarithmic quantities: Implications for the "hidden" concentration and pressure units in pH values, acidity constants, standard thermodynamic functions, and standard electrode potentials, The dimensions of. **Philip Molyneux.** 467
Lone electron motion delocalization and relocalization to write Lewis structures. **Ernest C. McGoran.** 19
Lost in the desert (AA). **Stephen DeMeo.** 114
Lucas test, A study of the. **Richard A. Kjonaas; Bernie A. Riedford.** 704
Luminescence decay experiment, Computer interfaced fast kinetics (CS). **R. M. Ballew; J. N. Demas; N. P. Ayala, M. Grubb; S. W. Snyder.** 222

M

Magnesium (USE). **Alton Banks.** 196
Magnetic illustration of the VSEPR theory, A (OP). **Manuel Hervas; L. Phillip Silverman.** 861
Magnetic stirrer improvement and design of clustered, Teflon-encapsulated magnetic stirbars. **R. L. Hertzler; M. Lucas; E. J. Eisenbraun.** 85
Magnetic two-dimensional analogue of VSEPR, A (OP). **C. Frank Shaw III; Bryan A. Shaw.** 861
Magnetism, Linear chain. **Richard L. Carlin.** 361
Malonic ester synthesis in the undergraduate laboratory, The. **Bernard E. Hoogenboom; Phillip J. Ihrig; Arne N. Langsjoen; Carol J. Linn; Stephen D. Mulder.** 689
Margarine means, Demonstrating what "light". A. **Donald Glover; Kenneth E. Kolb.** 654
Marvel at Illinois Wesleyan, 1911–1915, Carl S. **D. Stanley Tarbell; Ann T. Tarbell.** 539
Mass and energy, The concepts of (TF). **Hans Kolbenstvedt; Reidar Stolevik.** 826
Mass spectrometry, Quantitative determination of the amino acid composition of a protein using gas chromatography–. **Christian S. Hamann; David P. Myers; Karla J. Rittle; Edward F. Wirth; Owen A. Moe, Jr.** 438

Math methods

Acid–base reactions, More about the extent of. 989
Alternative method for calculating the critical compressibility factor for the Redlich–Kwong equation of state. 47
Bond angle, Finding the (LTE). 970

Calculating equilibrium concentrations by the continuation method. 40
Data for instruction in statistical methods, Reproducible bad. 310
Derivation of the Heller–McConnell equation, Simple. 894
Dimensions of logarithmic quantities, The. 467
Equations are actually matrix equations, Chemical. 984
Figures signify nothing, When. 469
First-order consecutive rate reaction. A different method for its solution, A simple (LTE). 179
How great is the great orthogonality theorem? 200
Introduction to signal processing in chemical measurement. A147
Kerrich's method for $y = \alpha x$ data when both y and x are uncertain. 368
Logarithmic diagram for the uranyl–carbonate–hydroxide complex equilibria, The. 569
MathCAD in chemistry calculations, Using (BULLETIN). A95
Modeling complex kinetics schemes: A computational experiment (CS). 985
Normal coordinate calculations as a classroom computer project (CS). 35
Numerical method to calculate equilibrium concentrations for single-equation systems, A (CS). 486
Quadratic equations to the correct number of significant figures, Solving. 409
Random samples represent populations so accurately? Why do. 902
Sine of a number, Taking the (LTE). 358
Statistics, Small sample. 470
System for rounding numbers, A new. 818
Tabular method for reducing representations, The. 373
Using the perturbed harmonic oscillator to introduce Rayleigh–Schrodinger perturbation theory. 203

MathCAD in chemistry calculations, Using (BULLETIN). **Zoran Zdravkovski.** A95
Matrix equations, Chemical equations are actually. **Robert A. Alberty.** 984
Measurement, An introduction to signal processing in chemical (TICI). **T. C. O'Haver.** A147
Mechanistic interpretation of pH–rate profiles. **G. Marc Loudon.** 973
Meeting one challenge for the '90's (PO). **Jack E. Fernandez; Jay H. Worrell.** 551
Menthol utilizing various consumer products, A sensual separation science experiment: Solvent extraction and chromatographic separation of. **Kenneth G. Furton; Maria I. Perez.** 946
Mercury liquid? Or, why do relativistic effects not get into chemistry textbooks? Why is. **Lars J. Norrby.** 110
Mercury-free alternative for temperature measurement in aluminum blocks, A (ML). **Charles M. Garner.** A244
Metabolites, Synthetic applications of aromatic. **D. E. F. Armstead.** 698
Metal-ion affinity chromatography, Purification of Milk whey α-lactalbumin by immobilized. **Rodney F. Boyer.** 430
Method for producing efficient concentric tube distillation columns, A simple. **Sherrel Smith.** 616
Method of deducing atomic spectroscopic terms: The method of number arrangement, A new. **Zhao Sen; Zheng Kemin; Wu Fenglin; Zhi Yinze.** 205
Methylene blue on activated carbon: An experiment illustrating both the Langmuir and Freundlich isotherms, Adsorption of. **J. H. Potgieter.** 349
Metric system, Having fun with the. **Mark L. Campbell.** 1043
Micro-Kipp gas generators (ML). **Byron J. Wilson.** A297
Microburet, Construction and use of an inexpensive (ML). **Mono M. Singh; Zvi Szafran; Ronald M. Pike.** A125
Microcomputer automation of volumetric titration (BULLETIN). **W. C. Mak; R. S. Tse.** A95
Micropipet, An ammonia fountain in a (ML). **Dianne N. Epp.** A297
Microscale experiment that displays regio-and stereochemistry using NMR spectroscopy and molecular mechanics calculations, Hydroboration-oxidation of (1*R*)-(+)-α-pinene to isopinocampheol: A. **Ronald L. Blankespoor; Kenneth Piers.** 693
Microscale laboratory at the high school level: Time efficiency and student response. **Patrick McGuire; James Ealy; Miles Pickering.** 869

Microscale laboratory, The, edited by Arden P. Zipp

A mercury-free alternative for temperature measurement in aluminum blocks. **Charles M. Garner.** A244
A microscale synthesis of indigo: Vat dyeing. **James R. McKee; Murray Zanger.** A242
A simple sublimation apparatus. **Henry Brouwer.** A62
An ammonia fountain in a micropipet. **Dianne N. Epp.** A297
An evaluation of drop counting as a volume measurement. **James Ealy; Miles Pickering.** A120
Construction and use of an inexpensive microburet. **Mono M. Singh; Zvi Szafran; Ronald M. Pike.** A125
Construction of a low-cost solution cell for infrared analysis. **Anthony Winston.** A124
Fluorocarbon bubbler fluids for reactive gases. **Alan B. Brown; J. W. Kosmeder; Paul D. Gaska; Chris W. Chronister; Luis P. Barthel-Rosa.** A298
Free radical halogenation of hydrocarbons: Experiments for organic chemistry using the small-scale approach. **Helmuth M. Gilow.** A122
Inert atmosphere techniques for the microscale laboratory. **Thomas A. Newton.** A60
Micro-Kipp gas generators. **Byron J. Wilson.** A297
Microscale resolution of racemic 1-phenylethylamine and chiral high performance liquid chromatography (HPLC) in undergraduate chemistry. **Miroslav Krumpolc.** A176
Small-scale thermochemistry experiment. **Henry Brouwer.** A178
Synthesis of *trans*-2-*tert*-butylcyclohexanol via hydroboration: A microscale organic experiment demonstrating syn addition. **Carl T. Wigal; William T. Hopkins; Bruce P. Ronald.** A299
The Wittig synthesis of alkenes by phase-transfer catalysis: The syntheses of 4,4'-dichlorostilbenes and of *E,E*-1,4-diphenylbutadiene. **Stephen W. Breuer.** A58

Microwave ovens in the laboratory, Domestic. **Didier Villemin; Frederic Thibault-Starzyk.** 346
Milk whey α-lactalbumin by immobilized metal-ion affinity chromatography, Purification of. **Rodney F. Boyer.** 430
Millikan oil drop experiment and for calculating empirical formulas, Finding largest common factors and simplest integer ratios: A useful analogy applicable to the (EQE). **Roger S. Macomber.** 42
Mineral oil as a halogen extraction solvent, The suitability of. **Thomas M. Scott.** 950
Miscibilities of liquids and liquid mixtures, Densities and (TD). **David A. Franz.** 594
Missing: A partial structure search exercise (LTE). **Henry I. Abrash.** 86
Mnemonic, An SI. **M. N. Quigley.** 815
MO's: A nonmathematical but honest approach, Pictorialized solid state. **John G. Verkade.** 739
Modeling as an integral part of an advanced lab course, Molecular (CS). **Stuart Rosenfeld.** 488
Modeling complex kinetics schemes: A computational experiment (CS). **Roger S. Macomber; Ioannis Constantinides.** 985
Modeller software in the teaching of structural chemistry, The use of the desktop molecular (CS). **S. Aduldecha; P. Akhter; P. Field; P. Nagle; E. O'Sullivan; K. O'Connor; B. J. Hathaway.** 576
Modelling for undergraduate organic chemistry students, Computer-assisted molecular (CS). **Vernon G. S. Box.** 662
Models of ions and water molecules for overhead projection, Magnetic (OP). **William G. Davies.** 245

Models

Cluster of tetrahedra penetrating each other, An easily constructed model of a. 1031
Coffee-stirrer structures. 459
Cuboctahedron, Paper model of a (LTE). 622
Enzyme activity and inhibition, A dynamic model to demonstrate. 286
Monocapped octahedron model, An easily constructed. 1030
Paper model for a triakis icosahedron constructed in an easy way. 996
Paper model of an icosahedron without faces, An easily constructed. 572.
Series of distorted tetrahedra penetrating each other in an all-trans coplanar conformation, An easily constructed model of a. 1032
Space-filling *P-V-T* models. 496
Tetrahedron penetrated by two trigonal pyramids, An easily constructed model of a distorted. 464
Trigonal prism capped trigonal prism model, An easily constructed. 640
Trigonal bipyramid, cube, and triakis octahedron, A convergent approach to models of. 643
Visual presentation of the relationships between the enthalpies of a reaction and the nature of the transition states, A. 731

Modern student laboratory

A computerized temperature measuring system using a commercial pH/ISE meter. **F. T. Chau; K. W. Mok.** A201
A semipreparative gas chromatography collection tube adapter. **Sang-Ho Lee; Martin Hulce.** A142
Determining optimum spectral bandwidth: An instrumental methods laboratory exercise. **Don D. Gilbert.** A278
Reduction of acetylferrocene with lithium aluminum hydride and resolution of the enantiomers with a chiral HPLC column: An experiment for the advanced undergraduate laboratory. **Dorothy E. Hamilton.** A143
Synthesis, oxidation and UV/IR spectroscopy illustrated: An integrated freshman lab session. **Uri Zoller; Aviva Lubezky; Miriam Danot.** A274
The analysis of artificial sweeteners and additives in beverages by HPLC: An undergraduate experiment. **Brian A. Bidlingmeyer; Stefan Schmitz.** A195
The preparation and testing of a fused-silica gas chromatography capillary column: An experiment for a senior undergraduate laboratory module. **R. John Kominar.** A249
The synthesis of cobalt(III) sepulcrate from tris(ethylenediamine)cobalt(III) and its purification by ion-exchange chromatography: An experiment for the advanced undergraduate inorganic laboratory. **Dorothy E. Hamilton.** A144

Molar mass and acid constant for a weak acid, Determination of. **Katrine S. Forland; Grete S. Hauge-Nilsen.** 674
Mole mnemonic, A. **Bernard S. Brown.** 1039
Molecular biologist: A basic cloning experiment for the undergraduate biochemistry lab, You too can be a. **Shawn O. Farrell; Lynn E. Farrell; Lori K. Dircks.** 707
Molecular mechanics in the undergraduate curriculum. **Ronald R. Sauers.** 816
Molecular modelling for undergraduate organic chemistry students, Computer-assisted (CS). **Vernon G. S. Box.** 662
Molecular orbital displays using mathematica, Two-dimensional atomic and (CS). **Randolph Cooper; Joseph Casanova.** 487
Molecular orbital wave functions in terms of resonance structures, Understanding. **Padeleimon Karafiloglou; Gilles Ohanessian.** 583
Molecular orbitals for second-row homonuclear diatomic molecules: The effect of s-p mixing, The relative energies of. **Albert Haim.** 737
Molybdenum, The synthesis of some diazenido and hydrazido complexes of. **J. R. Dilworth; J. R. Miller.** 788
Money *is* the answer! (LTE). **Terry L. Helser.** 444
Monocapped octahedron model, An easily constructed. **Shukichi Yamana.** 1030
Monoterpenes: An easily accessible but neglected class of natural products. **Christopher Gildewell.** 267
Monte Carlo simulations of polymer configurations, Comment on (LTE). **David S. Allan.** 621
Motivator, A (LTE). Daniell L. Mattern. 358
Must we continue to teach students to make cloth? (PO). **Dan M. Sullivan.** 1010

N

Naming elements (LTE). **Joseph Sencen.** 711
National Chemistry Week, A poster exhibit on stoichiometry for. **Richard A. Pacer.** 549
Natural and unnatural models for illustrating chirality at two centers. **Paul M. Nave.** 1028
Natural products, Monoterpenes: An easily accessible but neglected class of. **Christopher Gildewell.** 267
New directions in the history of the chemical sciences and technologies. **Mary Ellen Bowden; Seymour Mauskopf.** 183
News media to teach chemical principles, Using. **Richard S. Myers.** 769
Newton, the alchemist, Issac. **Mansel Davies.** 726
Nickel(II) complexes: An inorganic chemistry experiment, Preparation and characterization of two. **Cassandra T. Eagle; Frank Walmsley.** 336
Nickel, Reactivity of (REACT). **James P. Birk; Martha Ronan; Imogene Bennett; Cheri Kinney.** 48
Niobium trisulfide as an example, Giant molecules in solid state chemistry: Using. **Eric Sandre; Annie LeBlanc; Michel Danot.** 809
Nitric acid/nitrous acid and ferroin/ferriin system: A reaction that demonstrates autocatalysis, reversibility, pseudo orders, chemical waves, and concentration jump, The (TD). **György Bazsa; Istvan P. Nagy; Istvan Lengyei.** 863
Nitric oxide, Molecular paramagnetic resonance of gas-phase. **James W. Whittaker.** 421
NMR and the structure of D-glucose (TF). **Jerome E. Gurst.** 1003
NMR, Cyclic ketals of 9-fluorenone: Advanced organic laboratory exercise in synthesis and stereochemical analysis using ^{13}C. **Paul R. Rabien; Mark A. Deuber; Ai Ching Lim; Robert M. Dickson; Claude E. Wintner.** 796
NMR project, Diasteriospecific synthesis of *cis*- and *trans*-2,3-dimethyl-1,4-thiamorpholines: An advanced organic sythesis and. **Maria Teresa Gallego; Ernesto Brunet; Jose Luis Garcia Ruano; Ernest L. Eliel.** 517
NMR spectroscopy: A bioorganic experiment for the undergraduate laboratory, Determination of rates of proton exchange of thiamine hydrochloride by ^1H. **Christopher J. Murray; Kay L. Duffin.** 683
NMR spectroscopy and molecular mechanics calculations, Hydroboration-oxidation of (1*R*)-(+)-α-pinene to isopinocampheol: A microscale experiment that displays regio- and stereochemistry using. **Ronald L. Blankespoor; Kenneth Piers.** 693
NMR spectroscopy in drug design, Determining the conformation of a ligand bound to an enzyme: Application of. **David J. Craik; Kerry A. Higgins; Malea M. Kneen; Sharon L. A. Munro; Katherine J. Waterman.** 258
NMR spectroscopy to assign endo stereochemistry, Synthesis of a bicyclo[2.2.1]heptene Diels–Alder adduct: An organic chemistry experiment utilizing. **Ernest A. Harrison, Jr.** 426
NMR study of the stereochemistry of the fumarase-catalyzed hydration of fumaric acid, An. **Julie A. Olsen; Robert J. Olsen.** 436
NMR titration experiment, The microscopic protonation constants of N,N-dimethyl-1,3-propanediamine: An. **O. F. Onasch; H. M. Schwartz; D. A. Aikens; S. C. Buncel.** 791
NMR tube design for external referencing, A novel. **Fazale R. Rana; Jack Blazyk; Catherine M. Sultany.** 269
NMR, Undergraduate organic and polymer lab experiments that exemplify structure determination by. **T. Viswanathan; F. Watson; D. T. C. Yan.** 685
Nobel laureates and revised values for certain fundamental constants, Interdependency and the importance of errors in chemistry: How the search for a single error led to reexamination of the work of five. **Herb Bassow.** 273
Nobel laureates on stamps (LTE). **George B. Kauffmann.** 884
Nomenclature, Some conundrums of chemical. **Michael N. Quigley.** 1009
Nuclear magnetic resonance spectroscopy of 2-chloroacrylonitrile: A simple AB spin system. **L. C. Hoskins.** 83
Nuclear reactions versus inorganic reactions: And the winner is ... (REACT). **Judy Godfrey; Ron McLachian; Charles H. Atwood.** 819
Nuclei of any spin, Generalization of Pascal's triangle to. **Thomas A. Shaler.** 853
Numerical method to calculate equilibrium concentrations for single-equation systems, A (CS). **E. Weltin.** 486

O

Observations on the inverted bottle problem, Some (LTE). **Tsunetaka Sasaki.** 624
Observations on the inverted bottle problem, Some (LTE). **P. Glaister.** 623
Octahedron model, An easily constructed monocapped. **Shukichi Yamana.** 1030
"Old" new idea, An (LTE). **Leroy Chauffe.** 270
Olestra, a noncaloric substitute for dietary fat, The development of (PROD). **R. J. Jandacek.** 476
Optical isomerism, Chiral crackers: A palatable approach to. **Susan F. Griffin.** 1029
Optical transform: Simulating diffraction experiments in introductory courses, The. **George C. Lisensky; Thomas F. Kelly; Donald R. Neu; Arthur B. Ellis.** 91
Optimal conditions: An advanced undergraduate experiment that introduces experimental design and optimization, Attaining. **Hal Van Ryswyk; Gerald R. Van Hecke.** 878
Optimization of HPLC and GC separations using response surfaces: Three experiments for the instrumental analysis laboratory. **David T. Harvey; Shannon Byerly; Amy Bowman; Jeff Tomlin.** 162
Optimum spectral bandwidth: An instrumental methods laboratory exercise, Determining (MODLAB). **Don D. Gilbert.** A278
Orbital diagrams, The correct interpretation of Hund's rule as applied to "uncoupled states". **Mark L. Campbell.** 134
Orbital displays using mathematica, Two-dimensional atomic and molecular (CS). **Randolph Cooper; Joseph Casanova.** 487
Orbital wave functions in terms of resonance structures, Understanding molecular. **Padeleimon Karafiloglou; Gilles Ohanessian.** 583
Orbitals—Act two! There are no such things as. **Jack Simons.** 131
Orbitals, Computing overlaps between nonorthogonal. **Carl W. David.** 129
Orbitals for second-row homonuclear diatomic molecules: The effect of s-p mixing, The relative energies of molecular. **Albert Haim.** 737
Orbitals, The use of effective nuclear charge (Z^*) calculations to illustrate the relative energies of *n*s and (*n* - 1)d. **Christina Poth Brink.** 376

Organic chemistry

Alkaloids: Isolation and purification. 700
Benzoylacetic acid: Synthesis and examination of the tautomeric equilibrium. 66
Biocatalysis in organic solvents.13
Bond location in chair cyclohexane and related structures, A projection for. 646
Bromination using *N*-bromosuccinimide: A simple introductory organic chemistry experiment. 253
Chair and boat conformations of cyclohexane, A simple way to draw the. 957
Chelate-assisted carbon–halogen bond cleavage by oxidative addition at a W(0) carbonyl–metal complex. 786
Chemical databases and the laboratory computer. A99
Chiral crackers: A palatable approach to optical isomerism. 1029
Column chromatography isolate caffeine. 73
Computer-assisted molecular modelling for undergraduate organic chemistry students (CS). 662
Convenient synthesis of 3,4-pentadien-1-ol from 3-butyn-1-ol: Spectral analysis and unusual durability of the allene moiety. 256
Demonstrating organic synthesis with familiar materials (TD). 502
Demonstration of anti-Markovnikov addition to alkenes, A quick and effective. 785
Determining the conformation of a ligand bound to an enzyme. 258
Development of olestra, a noncaloric substitute for dietary fat (PROD). 476
Diasteriospecific synthesis of *cis*- and *trans*-2,3-dimethyl-1,4-thiamorpholines: An advanced organic sythesis and NMR project. 517
Discovering stereoselectivity: Synthesis of exo- and endobrevicomin using a tunable hydride reduction. 951
Diverse nature of the C_6H_6 molecule, The. 280
Easy way to convert a Fischer projection into a zigzag representation. 105
Elimination of 2,3-dibomo-3-phenylpropanoic acid to *E* or *Z* 1-bromo-2-phenylethylene (βD-bromostyrene): An experiment illustrating solvent effect on the thermochemical course of a reaction, Decarboxylative. 515
Equilibrium-kinetic approach for teaching introductory organic chemistry. 634
Evaluation of drop counting as a volume measurement (ML). A120
Fabric softeners as phase transfer catalyst in organic synthesis. 69

Facile semisynthesis of the antimalarial drug Qinghaosu. 612
False claims—corrected (LTE). 444
Fluorocarbon bubbler fluids for reactive gases (ML). A297
Freshman experience in qualitative organic analysis. 418
Friedel–Crafts alkylation products (LTE). 86
Glucose 6-phosphate dehydrogenase deficiency. 7
Grignard reagent, A puzzle-solving experiment utilizing a. 688
Halogenated solvents for halogen-halide extractions, An alternative to (ST). 509
Hofmann's benzene tree at the Kekule festivities. 887
Hydroboration-oxidation of (1*R*)-(+)-α-pinene to isopinocampheol. 693
Identification and rectification of student difficulties concerning three-dimensional structures, rotation, and reflection. 460
Inductive effect (LTE). 534
Inert atmosphere techniques for the microscale laboratory (ML). A60
Information sources for organic chemistry, 1 (CII). Part 1. 553; Part 2, 842
Internal comparison of the intermolecular forces of common organic functional groups. 428
Isomerization of dimethyl maleate to dimethyl fumarate. 1050
Isomeric structures, Representing. 190
Ketone derivative, A novel. 1046
Laboratory study of 1,3-dipole-dipolarophile addition. 614
Lucas test, A study of the. 704
Malonic ester synthesis in the undergraduate laboratory, The. 689
Mercury-free alternative for temperature measurement in aluminum blocks (ML). A244
Method for producing efficient concentric tube distillation columns, A simple. 616
Microscale free radical halogenation of hydrocarbons (ML). A122
Microscale resolution of racemic 1-phenylethylamine and chiral high performance liquid chromatography (HPLC) in undergraduate chemistry (ML). A176
Microscale synthesis of indigo: Vat dyeing (ML). A242
Mineral oil as a halogen extraction solvent, The suitability of. 950
Model of a series of distorted tetrahedra penetrating each other in an all-trans coplanar conformation, An easily constructed. 1032
Molecular mechanics in the undergraduate curriculum. 816
Molecular orbital wave functions in terms of resonance structures, Understanding. 583
Natural and unnatural models for illustrating chirality at two centers. 1028
NMR and the structure of D-glucose (TF). 1003
NMR study of the stereochemistry of the fumarase-catalyzed hydration of fumaric acid, An. 436
Nuclear magnetic resonance spectroscopy of 2-chloroacrylonitrile: A simple AB spin system. 83
Organic chemistry experiment utilizing NMR spectroscopy to assign endo stereochemistry. 426
Organic electrosynthesis without a potentiostat. 513
Organic unknowns that students prepare themselves. 378
Petroleum product additives, The chemistry of modern (PROD). 1015
Preparation of 1,4-di-*tert*-butylbenzene without $AlCl_3$: An undergraduate organic chemistry experiment, A simple. 793
Problem-solving approach to teaching organic laboratory, A. 503
Proton–carbon chemical shift correlations. 284
Puzzle-oriented organic laboratory, The. 232
Rates of proton exchange of thiamine hydrochloride by $_1$H NMR spectroscopy: A bioorganic experiment for the undergraduate laboratory, Determination of. 683
Recrystallization solvent, Selection of. 877
Reduction of a carbonyl compound using baker's yeast. 427
Resonance—a colorful approach, Explaining. 834
Silver from and some uses for waste silver chloride, Recovery of. 602
Soap bubble respirometry. 617
Stamps: Organic chemistry in postage stamps, Chemistry on (LTE). 884
Stereo vision from a pair of figures, Exact. 375
Structure determination by NMR, Undergraduate organic and polymer lab experiments that exemplify. 685
Sublimation apparatus, A simple (ML). A62
Synthesis of an ant alarm pheromone. 71
Synthesis of an isolable quinodimethane. 691
Synthesis of 2′-bromostyrene, The. 161
Synthesis of 2,6-dinitro-4-methylaniline from *p*-toluidine, The three-step. 682
Synthesis of photochromic materials used in sunglasses. 424
Synthesis of *trans*-2-*tert*-butylcyclohexanol via hydroboration: A microscale organic experiment demonstrating syn addition (ML). A299
Synthetic applications of aromatic metabolites. 698
Tetrahedron penetrated by two trigonal pyramids, An easily constructed model of a distorted. 464
Textile fiber identification. 1044
Thermal decomposition of diacyl peroxides and peresters. 510
Water solubility of 2-butanol: A widespread error (TF). 939
Wittig synthesis of alkenes by phase-transfer catalysis (ML). A58

Organometallic chemistry: A course designed for sophomore chemistry students. **Gary L. Miessler; Gary O Spessard.** 16
Organometallic laboratory experiment for advanced undergraduates, Chelate-assisted carbon–halogen bond cleavage by oxidative addition at a W(O) carbonyl–metal complex: Inorganic–. **Brett Lucht; Mitchell J. Poss; Thomas G. Richmond.** 786
Orthogonality theorem? How great is the great. **Carlos Contreras-Ortega; Leonel Vera; Eduardo Quiroz-Reyes.** 200

Overhead projector demonstrations, edited by Doris Kolb

A demonstration illustrating the factors determining rates of chemical reactions. **L. H. Holmes, Jr.** 501
A demonstration of hexagonal close-packed and cubic close-packed crystal structures. **John D. Foote; Harvey F. Blanck.** 777
A magnetic illustration of the VSEPR theory. **Manuel Hervas; L. Phillip Silverman.** 861
A magnetic two-dimensional analogue of VSEPR. **C. Frank Shaw III; Bryan A. Shaw.** 861
Acid rain investigations. **Dianne N. Epp; Robert Curtright.** 1034
Demonstrations of interfacial phenomena. **Bruce R. Prall.** 592
Magnetic models of ions and water molecules for overhead projection. **William G. Davies.** 245
Teaching photometry with overhead projector experiments. **Ivano G. R. Gutz; Lucio Angnes; Jairo J. Pedrotti.** 325
Using a motor to demonstrate conductivity. **Sally Solomon; Annamaria Fulep-Poszmik.** 160

Oxidation numbers: A more user-friendly approach, Lewis structures, formal charge, and. **John E. Packer; Sheila D. Woodgate.** 456
Oxidation of alcohols: Benzoin to benzil and borneol to camphor, A mild and convenient. **Thomas S. Straub.** 1048
Oxoacids, A procedure for determining formulas for the simple p-block. **Nicholas K. Kildahl.** 1001
Oxygen to support combustion, Use of liquid (TD). **Dan M. Sullivan.** 1036

P

Paper dyed with red cabbage juice, Making colorful patterns on (CK). **Chieko Suzuki.** 588
Paper model for a triakis icosahedron constructed in an easy way, A. **S. Y. Lam-Leung; S. K. Tsang.** 996
Paper model of an icosahedron without faces, An easily constructed. **V. D. Kelkar.** 572
Paramagnetic resonance of gas-phase nitric oxide, Molecular. **James W. Whittaker.** 421
Pascal's triangle to nuclei of any spin, Generalization of. **Thomas A. Shaler.** 853
Passivation, and pitting of iron in aqueous media, Experimental demonstration of corrosion phenomena: The corrosion. **Omar Solorza; Lucrecia Olivares; Jorge G. Ibanez.** 175
Pentaammineni tritocobalt(III) to pentaammineni trocobalt(III) linkage isomerization revisited"—A correction, "Kinetics of. **W. Gregory Jackson.** 903
Periodic chart of the elements, The electronic (LTE). **Eric R. Scerri.** 712
Perry model to general chemistry, Developmental instruction: Part II. Application of the. **David C. Finster.** 752
Petroleum product additives, The chemistry of modern (PROD). **Paul F. Vartanian.** 1015
pH/ISE meter, A computerized temperature measuring system using a commercial (MODLAB). **F. T. Chau; K. W. Mok.** A201
pH–rate profiles, Mechanistic interpretation of. **G. Marc Loudon.** 973
Phase-transfer catalysis: The syntheses of 4,4′-dichlorostilbenes and of *E,E*-1,4-diphenylbutadiene, The Wittig synthesis of alkenes by (ML). **Stephen W. Breuer.** A58
Phase transfer catalyst in organic synthesis, Fabric softeners as. **Albert W. M. Lee; W. C. Yip.** 69
Phases, Liquid systems with more than two immiscible. **Jan Kochansky.** 655
Phenolphthalein, reaction of (LTE). 446
Pheromone, The Synthesis of 2-methyl-4-heptanone: An ant alarm pheromone. **Elma A. de Jong; Ben L. Feringa.** 71

Philosophy of education

Biases-our responses, Our only recourse to (LTE). 358
Chemical education at the crossroads (PO). 305

Provocative opinion

Chemical education at the crossroads. **F. Michael Akeroyd.** 305
Meeting one challenge for the '90's. **Jack E. Fernandez; Jay H. Worrell.** 551
Must we continue to teach students to make cloth? **Dan M. Sullivan.** 1010
The role of scientists in the improvement of science education. **James H. Swinehart.** 195
Unifying laboratory and lecture in general chemistry. **David K. Erwin.** 862

Provocative opinions on the terminology of chemical kinetics, Some (TF). **John C. Reeve.** 728
Pumpkin, Why there's frost on the. **Walter H. Corkern; L. H. Holmes, Jr.** 825
Purification of glucose-6-phosphate dehydrogenase by ion-exchange chromatography, Versatile partial. **John W. Keller; Matthew K. Wise; Rebecca A. Reynolds.** 265
Puzzle, Anions—A. **Dorothy J. Mandelin.** 1033
Puzzle-oriented organic laboratory, The. **Miles Pickering.** 232

Q

Quadratic equations to the correct number of significant figures, Solving. **Rudolf Thomas.** 409
Qualitative analysis of eleven household compounds. **Sally Solomon; Annamaria Fulep-Poszmik; Alan Lee.** 328
Qualitative analysis of selected metal cations, A flexible automated laboratory system for the (TICI). **James F. Blankenship; Steven Costello; Matthew Sprouse; Frank A. Settle, Jr.; Rosina H. Bolen; Michael A. Pleva.** A65
Qualitative analysis scheme without hazardous wastes, A short. **John T. Petty.** 942
Qualitative organic analysis, A brief freshman experience in. **John R. Griswold; Richard A. Rauner.** 418
Quantitative analysis, Investigation of experimental parameters: A student project for. **Donald L. Campbell.** 784
Quantitative analysis laboratory, Statistical evaluation of acid/base indicators: A first experiment for the. **David T. Harvey.** 329
Quantitative determination of the amino acid composition of a protein using gas chromatography-mass spectrometry. **Christian S. Hamann; David P. Myers; Karla J. Rittle; Edward F. Wirth; Owen A. Moe, Jr.** 438
Quantitative relationships between variables, Student conceptions and competence concerning. **Mailoo Selvaratnam; Sudath Kumarasinghe.** 370
Quantum history chart. **David E. Goodney.** 473
Quantum mechanics with a spreadsheet (BULLETIN). **Frank Rioux.** A282
Quantum shoe store and electron structure, The (AA). **M. Bonneau.** 837
Quinodimethane, Synthesis of an isolable. **Stuart Rosenfeld; Sarah Van Dyke.** 691

R

Radical proposal, A modest (VIEW). **Stephen R. Marsden.** 770
Radioactive isotopes: A spreadsheet application, A cumulative count method for determining the half-life of barium-137 and gallium-68 (BULLETIN). **Elvin Hughes, Jr.** A41

Radiochemistry

Cold fusion? What ever happened to. 277
Concepts of mass and energy (TF). 826
Cumulative count method for determining the half-life of barium-137 and gallium-68 radioactive isotopes: A spreadsheet application (BULLETIN). A41
Half-life determination in a mixture of two independently decaying radionuclides. 171
Isotope separation. 312

Radon in the home. **R. Bruce Martin.** 275
Random samples represent populations so accurately? Why do. **Ruben D. Cohen.** 902
Rate-determining step, Reactant fluxes in the steady state: The. **Edward L. King.** 897
Rates of chemical reactions, A demonstration illustrating the factors determining (OP). **L. H. Holmes, Jr.** 501
Rates of proton exchange of thiamine hydrochloride by ^{1}H NMR spectroscopy: A bioorganic experiment for the undergraduate laboratory, Determination of. **Christopher J. Murray; Kay L. Duffin.** 683
Rayleigh–Schrodinger perturbation theory, Using the perturbed harmonic oscillator to introduce. **Karl Sohlberg; David Shreiner.** 202
Reactant combinations from approximate elemental analysis data, A BASIC program for computing (CS). **Udayampalayam P. Senthikumar; Rajogopalan Vijayalakshmi; Ramasubbu Jeyaraman.** 773
Reactant fluxes in the steady state: The rate-determining step. **Edward L. King.** 897
Reaction of phenolphthalein (LTE). **Lloyd Hile.** 446

Reactivity network, edited by Edward K. Mellon

Nuclear reactions versus inorganic reactions: And the winner is . . . **Judy Godfrey; Ron McLachian; Charles H. Atwood.** 819
Reactivity of nickel. **James P. Birk; Martha Ronan; Imogene Bennett; Cheri Kinney.** 48

Real life samples for unknowns in analytical chemistry, The use of. **Anne T. Sherren.** 598

Real world of industrial chemistry edited by Kenneth E. Kolb and Harold E. Witcoff

Vinyl chloride in Asia. **Roy H. King; Bryan G. Reuben.** 480

Recrystallization solvent, Selection of. **Saqib Ali; Abida Kalsoom.** 877
Recycling Drierite. **James A. Green; Rudi W. Goetz.** 429
Red cabbage juice, Making colorful patterns on paper dyed with (CK). **Chieko Suzuki.** 588
Redlich–Kwong equation of state, An alternative method for calculating the critical compressibility factor for the. **Carlos Castillo S.** 47
Redox demonstrations and descriptive chemistry: Part 3. Copper(I)–Copper(II) equilibria (TD). **Charles E. Ophardt.** 248
Reducing representations, Tabular method for. **Robert L. Carter.** 373
Reference list for elementary through college teachers emphasizing chemistry with some physics and life science, Science demonstrations, experiments, and resources: A. **David A. Katz.** 235
Reflux operations in a drybox, A simple and inexpensive condenser for. **James C. Stevens.** 77
"Relative" numbers (LTE). **Harry H. Sisler.** 86
Report from the 11th Biennial Conference on Chemical Education. **E. K. Mellon; E. J. Pulliam; T. G. Berger B.** 715
Report on WPI–NEACT conference: "General chemistry; Approaching the 21st century." **H. Beall.** 835
Research, An alternate approach to teaching undergraduate. **Larry L. Kirk; Larry F. Hanne.** 839
Research program for community college students, A collaborative summer. **Chris L. Craney; Franklin P. DeHaan.** 904
Research program, The evolution of a viable undergraduate. **Wing hong Chan; Albert Wai ming Lee.** 647
Resonance—a colorful approach, Explaining. **Kenton B. Abel; William M. Hemmerlin.** 834
Resonance structures, Understanding molecular orbital wave functions in terms of. **Padeleimon Karafiloglou; Gilles Ohanessian.** 583
Respirometry, Soap bubble. **Ken Cummins.** 617
Return on investment (BULLETIN). **Justin W. Diehl; Larry M. Wier.** A42
Rotating disk voltammetry experiment. **Julie L. Town; Fiona MacLaren; Howard D. Dewald.** 352
Rotation, and reflection, Identification and rectification of student difficulties concerning three-dimensional structures. **Helen Tuckey; Mailoo Selvaratnam; John Bradley.** 460
Rotational levels with respect to full symmetry point groups, Simple way of labeling. **Katsuyoshi Yamasaki.** 574
Rounding numbers, A new system for. **Charles J. Guare.** 818

Rubbers, Elastomers: II. Synthetic (PROD). **George B. Kauffman; Raymond B. Seymour.** 217

S

Sabatier effect, Solarization: The photographic. **William L. Jolly.** 3
Safe and inexpensive device to show the conductivity of solutions, A. **Rubin Battino.** 79
Safe apparatus for lecture hall conductivity demonstration, A low-cost, portable, and. **Gary D. Mercer.** 619

Safety

Explosion danger: spray-drying of nickel nitrate-starch suspension, Warning! (LTE). 620
Hazardous students (LTE). 883
Qualitative analysis scheme without hazardous wastes, A short. 942

Safety in the chemical laboratory edited by Malcom M. Renfrew

On hazardous silver compounds. **John L. Ennis; Edward S. Shanley.** A6
The color of safety. **L. L. Munchausen; W. H. Corkern.** A101

Safety instruction, A novel approach to chemical. **Suzanne R. Carpenter; Robert A. Kolodny; Henry E. Harris.** 498
Safety shield from a plastic water jug, An inexpensive. **John J. Fortman.** 234
Safety survey, High school chemistry. **Edward G. Senkbeil.** 410

Safety tips edited by Tim Champion

An alternative to halogenated solvents for halogen-halide extractions. **Steven C. Petrovic; George M. Bodner.** 509

Santonin in *Artemisia pontica*, the other wormwood of old absinthe, A search for. **Wilfred N. Arnold; Timothy P. Dalton; Loretta S. Loftus; Patrick A. Conan.** 27
Scholarship and chemistry teaching in the two-year college. **Sudhir B. Abhyankar; Arthur M. Last; Patrick K. Monaghan; Robert R. Perkins; Geoffrey W. Rayner Canham; J. Norman Reed; Michael J. Webb.** 145
Schrodinger perturbation theory, Using the perturbed harmonic oscillator to introduce Rayleigh–. **Karl Sohlberg; David Shreiner.** 203
Schroedinger equation for vibration via spreadsheet, Direct solution of (BULLETIN). **Stephen K. Knudson.** A39
Scientific ethics (LTE). **Marcia L. Gillette.** 624
Scientific method, Why does popcorn pop?: An introduction to the. **Frederick C. Sauls.** 415
Scoring examinations, Comparison of two methods for. **Charles E. Becker.** 309
Se^{4+} by its catalysis of the ferric-ion/thiosulfate reaction, Estimation of microgram amounts of. **M. Lampard.** 512
Semiconducting materials in the laboratory: Production of CdS thin films and estimation of their band gap energy, Preparation of. **Jorge G. Ibanez; Omar Solorza; Enrique Gomez-del-Campo.** 872
Separating or identifying plastics, Method for. **Kenneth E. Kolb; Doris K. Kolb.** 348
Separation of cations in aqueous media, Teaching chemistry with expert systems: Systematic chemical (CS). **M. S. Larrechi; F. X. Rius.** 659
Separation science experiment: Solvent extraction and chromatographic separation of menthol utilizing various consumer products, A sensual. **Kenneth G. Furton; Maria I. Perez.** 946
Separations utilizing gel filtration and ion-exchange chromatography. **Salvatore F. Russo; Angie Radcliffe.** 168
Sherlock Holmes: A Christmas story, The chemical adventures of. **Thomas G. Waddell; Thomas R. Rybolt.** 1023
Shift correlations, Proton–carbon chemical. **Roger S. Macomber.** 284
SI mnemonic, An. **M. N. Quigley.** 815
Signal processing in chemical measurement, An introduction to (TICI). **T. C. O'Haver.** A147
Significant figures, Solving quadratic equations to the correct number of. **Rudolf Thomas.** 409
Silver compounds, On hazardous (SAFETY). **John L. Ennis; Edward S. Shanley.** A6
Silver from and some uses for waste silver chloride, Recovery of. **J. A. Murphy; A. H. Ackerman; J. K. Heeren.** 602
Simplification, A call for (LTE). **Donald Peterson.** 443
Simplification, A call for (LTE). **Verner Schomaker; Jurg Waser.** 443
Simulations of Fourier transform experiments, Software (BULLETIN). **Ron C. Estler.** A220
Sine of a number, Taking the (LTE). **Ronald L. Rich.** 358
Soap bubble respirometry. **Ken Cummins.** 617
Soda, Freezing point depression in a bottle of (TD). **William D. Bare.** 1038
Solarization: The photographic Sabatier effect. **William L. Jolly.** 3
Solid and a thermodynamic functional determinant, Thermodynamics of an incompressible. **R. J. Tykodi.** 830
Solid-state chemistry, The preparation and characterization of an X-type zeolite: An experiment in. **Kenneth J. Balkus, Jr.; Kieu T. Ly.** 875
Solid state chemistry: Using niobium trisulfide as an example, Giant molecules in. **Eric Sandre; Annie LeBlanc; Michel Danot.** 809
Solubility of 2-butanol: A widespread error, The water (TF). **Donald B. Alger.** 939
Solutions in the biochemistry lab: An essential, basic skill, Preparing. **John M. Risley.** 1054
Solutions, Student preparations of standard. **Michael N. Quigley.** 505
Solvent from iodine solutions, Recovering. **Francisco J. Arnaiz; Juan A. Casares.** 516
Solvent mixtures: A simple approach to a special case of nonideal binary mixture behavior, Synergistic effects in binary. **P. Jacques.** 347
Sorption of liquids by polymer films: A simple laboratory experiment, Kinetic and thermodynamic study on the. **Tejraj M. Aminabhavi; Shivaputrappa B. Harogoppad.** 343
Space-filling *P-V-T* models. **Don B. Hilton.** 496
Spectroelectrochemical demonstration of a modified Belousov–Zhabotinskii reaction, A. **Jeffrey Rosenthal.** 794

Spectroscopy

Carbon–carbon bond length from the absorption spectra of cyanine dyes, Determination of. 506
Chemical databases and the laboratory computer. A99
Construction of a low-cost solution cell for infrared analysis (ML). A124
Deducing atomic spectroscopic terms: The method of number arrangement, A new method of. 205
Degassing samples, A rapid method for. 604
Delayed X-ray technique: Principles, comparison with other techniques, practical applications. 173
Derivation of the Heller–McConnell equation, Simple. 894
Determining optimum spectral bandwidth: An instrumental methods laboratory exercise (MODLAB). A278
Determining the composition of an unknown using atomic emission spectroscopy and a spreadsheet sort (BULLETIN). A286
Determining the conformation of a ligand bound to an enzyme. 258
Diasteriospecific synthesis of *cis*- and *trans*-2,3-dimethyl-1,4-thiamorpholines: An advanced organic sythesis and NMR project. 517
Experiments in synchronous fluorescence spectroscopy for the undergraduate instrumental chemistry course. 433
Flow-injection spectrophotometric experiment: A laboratory exercise, Reaction kinetics in a. 966
Fourier transform in X-ray and electron scattering of hydrogenlike atoms, The. 889
Gas cell for infrared spectroscopy. 668
History of spectroscopy, The early. 631
Instructional materials for teaching surface analysis. 380
Microscale experiment that displays regio- and stereochemistry using NMR spectroscopy and molecular mechanics calculations. 693
Molecular paramagnetic resonance of gas-phase nitric oxide. 421
NMR and the structure of D-glucose (TF). 1003
NMR study of the stereochemistry of the fumarase-catalyzed hydration of fumaric acid, An. 436
NMR titration experiment. 791
NMR tube design for external referencing, A novel. 269
Nuclear magnetic resonance spectroscopy of 2-chloroacrylonitrile: A simple AB spin system. 83
Organic chemistry experiment utilizing NMR spectroscopy to assign endo stereochemistry. 426
Pascal's triangle to nuclei of any spin, Generalization of. 853
Proton–carbon chemical shift correlations. 284
Quantitative determination of the amino acid composition of a protein using gas chromatography-mass spectrometry. 438
Rates of proton exchange of thiamine hydrochloride by ^1H NMR spectroscopy: A bioorganic experiment for the undergraduate laboratory, Determination of. 683
Software simulations of Fourier transform experiments (BULLETIN). A220
Synthesis and spectroscopy of metal complexes, An undergraduate laboratory experiment involving. 681
Synthesis, oxidation and UV/IR spectroscopy illustrated: An integrated freshman lab session (MODLAB). A274
Undergraduate experiment illustrating amine-catalyzed alkene isomerization, stereochemical principles, sublimation, and product identification by spectroscopic methods. 1050
Undergraduate laboratory experiment using infrared absorptions to monitor decomposition rates. 510

Spectrum analogy, Bright-line (F&R). **Richard A. Samsa.** 412
Spin state and electrochemistry of iron porphyrins: An advanced laboratory experiment, Axial ligand effects on the. **David K. Geiger.** 340
Sprayer for the chemistry lab, Inexpensive chromatography. **L. A. Lopez-Dellamary.** 432
Spreadsheet application, A cumulative count method for determining the half-life of barium-137 and gallium-68 radioactive isotopes: A (BULLETIN). **Elvin Hughes, Jr.** A41
Spreadsheet calculations for X-ray powder diffraction patterns (BULLETIN). **Jeffrey Rosenthal.** A285

Spreadsheet, Direct solution of Schroedinger equation for vibration via (BULLETIN). **Stephen K. Knudson.** A39
Spreadsheet, Quantum mechanics with a (BULLETIN). **Frank Rioux.** A282
Spreadsheet scripting, Advanced titration plots using (CS). **James O. Currie, Jr.; Richard V. Whiteley, Jr.** 923
Spreadsheet, Simulation of single-step chronoamperometry via (BULLETIN). **Hal Van Ryswyk.** A283
Spreadsheet sort, Determining the composition of an unknown using atomic emission spectroscopy and a (BULLETIN). **Elvin Hughes, Jr.; Consetta D. Dugas; Sam Hodges; Sheila L. Tracey.** A286
Spreadsheets, The Legendre transformation and. **Carl W. David.** 893
St. Patrick's day special—a boron flame shamrock (TD). **Thomas T. Earles.** 57
Stage for use in chemistry demonstrations, A lighted (TD). **Bjorn Olesen; Lester L. Leaton.** 594
Stamps, Nobel laureates on (LTE). **George B. Kauffmann.** 884
Stamps: Organic chemistry in postage stamps, Chemistry on (LTE). **W. Pitt Palmer.** 884
Standard hydrogen electrode, On the (LTE). **Z. Wuchang; L. Jiaxing; S. Hebal.** 356
Standard solutions, Student preparations of. **Michael N. Quigley.** 505
Statistical concepts in a design-oriented laboratory course in scientific measuring, The development of. **Martin J. Goedhart; Adri H. Verdonk.** 1005
Statistical insight into how equilibrium is achieved and the stability of an equilibrium state, Approach to equilibrium: The wasp and beetle model: (CS). **Albert Chang; Russell D. Larsen.** 297
Statistical methods, Reproducible bad data for instruction in. **Thomas H. Richardson.** 310
Statistics, Small sample. **Jonathan Mitschele.** 470
Statistics, The advantages and limitations of (LTE). **Peter D. Mlynek.** 180
Steady state: The rate-determining step, Reactant fluxes in the. **Edward L. King.** 897
Steel in aqueous media, Experimental demonstration of corrosion phenomena: Part II. Corrosion phenomena of. **Elsa M. Arce; Roman Ramirez; Felipe Cortes; Jorge G. Ibanez.** 351
Stereo vision from a pair of figures, Exact. **Tsukasa Sakai.** 375
Stereochemical principles, sublimation, and product identification by spectroscopic methods, Isomerization of dimethyl maleate to dimethyl fumarate: An undergraduate experiment illustrating amine-catalyzed alkene isomerization. **Craig B. Fryhle; Carol M. Rybak; Kenneth E. Pulley.** 1050
Stereoselectivity: Synthesis of exo- and endobrevicomin using a tunable hydride reduction: A program of organic synthesis experiments for advanced undergraduate students, Discovering. **David P. Richardson; Whitney Wilson; Rebecca J. Mattson; Dawn M. Powers; Brian T. Dolan.** 951
Stir motor assembly—Simple and cheap (IC). **Clem Zidick.** 1041
Stirrer improvement and design of clustered, Teflon-encapsulated magnetic stirbars, Magnetic. **R. L. Hertzler; M. Lucas; E. J. Eisenbraun.** 85
Stirring, sideways. **Griffith Liang.** 525
Stoichiometry experiment, Synthesis of an insoluble salt: A (F&R). **Erling Anthony.** 1040
Structural chemistry, The use of the desktop molecular modeller software in the teaching of (CS). **S. Aduldecha; P. Akhter; P. Field; P. Nagle; E. O'Sullivan; K. O'Connor; B. J. Hathaway.** 576
Structure? Ammonium hydroxide: What is its (LTE). **Thomas R. Tuttle, Jr.** 533
Structure determination by NMR, Undergraduate organic and polymer lab experiments that exemplify. **T. Viswanathan; F. Watson; D. T. C. Yan.** 685
Structure is . . . ? And the. **S. S. Stradling.** 378
Structures, coffee-stirrer. **Robert Becker.** 459
Structures, rotation, and reflection, Identification and rectification of student difficulties concerning three-dimensional. **Helen Tuckey; Mailoo Selvaratnam; John Bradley.** 460

Student evaluation

Conceptions and competence concerning quantititative relationships between variables, Student. 370
Context on the translation of sentences into algebraic equations, The effect of. 306
Determining students' ability to transfer specific volumes of liquid. 941
Dropping lowest and highest scores (LTE). 358
Examinations in the first course in college chemistry, The content of final. 638
Exams to teach chemistry more effectively, Using. 455
Grades to absent students-revisited, Assigning. 319
Grading to reward accumulated knowledge. 492
Matching laboratory learning goals to evaluation of student performance: A standards-based approach. 590
Scoring examinations, Comparison of two methods for. 309

Student understanding (LTE). **Barbara A. Sawrey.** 970
Student understanding (LTE). **Toby Block.** 969
Study of some 2-chloro-2-methylpropane kinetics using a computer interface, A. **Anthony Allen; Adam J. Haughey; Yolanda Hernandez; Scot Ireton.** 609
Styrene, A safe and novel polymerization of (TD). **Brendan R. Flynn.** 1038
Sublimation apparatus, A simple (ML). **Henry Brouwer.** A62
Sublimation of dry ice with a polystyrene foam cup calorimeter, Measuring the heat of. **Albert W. Burgstahler; Clark E. Bricker.** 332
Sucrose density gradients, A reliable, fast, and inexpensive method of preparing. **Paul M. Taslimi; Demetre Kolokotronis.** 58
Sulfur dioxide, Demonstration properties of (TD). **H. Brouwer.** 417
Sunglasses: A patent-based advanced organic synthesis project and demonstration, Photochromic. **Bruce Osterby; Ronald D. McKelvey; Lisa Hill.** 424
Superoxide dismutase and the Briggs–Rauscher reaction (TD). **David A. Franz.** 57
Surface analysis, Instructional materials for teaching. **Kathryn R. Williams; Vaneica Y. Young.** 380
Symmetry, degeneracies in separable systems with O_h. **C. A. Hollingsworth.** 23
Symmetry point groups, Simple way of labeling rotational levels with respect to full. **Katsuyoshi Yamasaki.** 574
Synchronous fluorescence spectroscopy for the undergraduate instrumental chemistry course, Experiments in. **Colleen M. Byron; T. C. Werner.** 433
Synergistic effects in binary solvent mixtures: A simple approach to a special case of nonideal binary mixture behavior. **P. Jacques.** 347
Synthesis and characterization of dinuclear tungsten carbonyl anions. **Timothy J. McNeese.** 678
Synthesis and examination of the tautomeric equilibrium, Benzoylacetic acid: **Stuart Rosenfeld; Alecia Williams.** 66
Synthesis and spectroscopy of metal complexes, An undergraduate laboratory experiment involving. **I. S. Ahuja; Shailendra Tripathi.** 681
Synthesis in the undergraduate laboratory, The malonic ester. **Bernard E. Hoogenboom; Phillip J. Ihrig; Arne N. Langsjoen; Carol J. Linn; Stephen D. Mulder.** 689
Synthesis of a bicyclo[2.2.1]heptene Diels–Alder adduct: An organic chemistry experiment utilizing NMR spectroscopy to assign endo stereochemistry. **Ernest A. Harrison, Jr.** 426
Synthesis of an insoluble salt: A stoichiometry experiment (F&R). **Erling Anthony.** 1040
Synthesis of an isolable quinodimethane. **Stuart Rosenfeld; Sarah Van Dyke.** 691
Synthesis of 2′-bromostyrene, The. **Linda Corvari; James R. McKee; Murray Zanger.** 161
Synthesis of *cis*- and *trans*-2,3-dimethyl-1,4-thiamorpholines: An advanced organic sythesis and NMR project, Diasteriospecific. **Maria Teresa Gallego; Ernesto Brunet; Jose Luis Garcia Ruano; Ernest L. Eliel.** 517
Synthesis of cobalt(III) sepulcrate from tris(ethylenediamine)cobalt(III) and its purification by ion-exchange chromatography: An experiment for the advanced undergraduate inorganic laboratory, The (MODLAB). **Dorothy E. Hamilton.** A144
Synthesis of 2,6-dinitro-4-methylaniline from *p*-toluidine, The three-step. **David Todd.** 682
Synthesis of exo- and endobrevicomin using a tunable hydride reduction: A program of organic synthesis experiments for advanced undergraduate students, Discovering stereoselectivity: **David P. Richardson; Whitney Wilson; Rebecca J. Mattson; Dawn M. Powers; Brian T. Dolan.** 951
Synthesis of indigo: Vat dyeing, A microscale (ML). **James R. McKee; Murray Zanger.** A242
Synthesis of 2-methyl-4-heptanone: An ant alarm pheromone, The. **Elma A. de Jong; Ben L. Feringa.** 71
Synthesis of 3,4-pentadien-1-ol from 3-butyn-1-ol: Spectral analysis and unusual durability of the allene moiety, A convenient. **William A. Price; Timothy E. Patten.** 256
Synthesis of some diazenido and hydrazido complexes of molybdenum, The. **J. R. Dilworth; J. R. Miller.** 788
Synthesis of *trans*-2-*tert*-butylcyclohexanol via hydroboration: A microscale organic experiment demonstrating syn addition (ML). **Carl T. Wigal; William T. Hopkins; Bruce P. Ronald.** A299
Synthesis, oxidation and UV/IR spectroscopy illustrated: An integrated freshman lab session (MODLAB). **Uri Zoller; Aviva Lubezky; Miriam Danot.** A274
Synthesis with familiar materials, Demonstrating organic (TD). **Otis Rothenberger; Roger Bunting; Thomas Newton.** 502
Synthetic applications of aromatic metabolites. **D. E. F. Armstead.** 698
Syringe cleaner, Vacuum. **Michael N. Quigley.** 520
System for rounding numbers, A new. **Charles J. Guare.** 818

T

Tabular method for reducing representations, The. **Robert L. Carter.** 373
Taxonomy of relationships among the elements, A. **Ronald L. Rich.** 828

Teaching aids

Chiral crackers: A palatable approach to optical isomerism. 1029
Natural and unnatural models for illustrating chirality at two centers. 1028

Teaching techniques

Adding heart and soul to the chemistry classroom (VIEW). 999

Application of the Perry model to general chemistry. 752
Approach to equilibrium: The wasp and beetle model (CS). 297
Approach to improving communication skills in a laboratory setting: The use of writing consultants. 150
Aufbau rewritten. 396
Bright-line spectrum analogy. (F&R). 412
Business students using the issues-directed approach, College chemistry for 483
Chair and boat conformations of cyclohexane, A simple way to draw the. 957
Chemical adventures of Sherlock Holmes: A Christmas story. 1023

Diffraction of a laser light by a memory chip. **Kamil Klier; J. Ashley Taylor.** 155
Freezing point depression in a bottle of soda. **William D. Bare.** 1038
Half-cell reactions: Do students ever see them? **Joseph D. Ciparick.** 247
Redox demonstrations and descriptive chemistry: Part 3. Copper(I)–Copper(II) equilibria. **Charles E. Ophardt.** 248
Some modified two-color formaldehyde clock salutes for schools with colors of gold and green or gold and red. **John J. Fortman; Jeffrey A. Schreier.** 324
Spontaneous detonation of a mixture of two odd electron gases. **Thomas S. Briggs.** 938
Superoxide dismutase and the Briggs–Rauscher reaction. **David A. Franz.** 57
The nitric acid/nitrous acid and ferroin/ferriin system: A reaction that demonstrates autocatalysis, reversibility, pseudo orders, chemical waves, and concentration jump. **Gyorgy Bazsa; Istvan P. Nagy; Istvan Lengyei.** 863
The reusable heat pack. **Lyle V. McAfee; Charles F. Jumper.** 780
The voltaic pile: A stimulating general chemistry experiment. **Pirketta Scharlin; Rubin Battino.** 665
Thermochromic behavior of cobalt(II) halides in nonaqueous solvents and on filter paper. **William D. Bare; E. K. Mellon.** 779
Use of liquid oxygen to support combustion. **Dan M. Sullivan.** 1036
Viscosity races. **William M. Hemmerlin; Kenton B. Abel.** 417

Tetrahedra penetrating each other in an all-trans coplanar conformation, An easily constructed model of a series of distorted. **Shukichi Yamana.** 1032
Tetrahedra penetrating each other, An easily constructed model of a cluster of. **Shukichi Yamana.** 1031
Tetrahedron penetrated by two trigonal pyramids, An easily constructed model of a distorted. **Shukichi Yamana.** 464

Textbook forum edited by Ralph K. Birdwhistell

Entropy-controlled reactions: An interesting textbook error. **Zdenek Slanina.** 474
NMR and the structure of D-glucose. **Jerome E. Gurst.** 1003
Some provocative opinions on the terminology of chemical kinetics. **John C. Reeve.** 728
The concepts of mass and energy. **Hans Kolbenstvedt; Reidar Stolevik.** 826
The efficiency of reversible heat engines: The possible misinterpretation of a corollary to Carnot's theorem. **Kurt Seidman; Thomas R. Michalik.** 208
The water solubility of 2-butanol: A widespread error. **Donald B. Alger.** 939

Textile fiber identification: An organic-polymer laboratory. **Robert L. Flachskam, Jr.; Nancy W. Flachskam.** 1044

Theoretical chemistry

Atomic orbitals (LTE). 710
Bond location in chair cyclohexane and related structures, A projection for. 646
Computer-assisted molecular modelling for undergraduate organic chemistry students (CS). 662
Computing overlaps between nonorthogonal orbitals. 129
Correct interpretation of Hund's rule as applied to "uncoupled states" orbital diagrams. 134
Deducing atomic spectroscopic terms: The method of number arrangement, A new method of. 205
Degeneracies in separable systems with O_h symmetry. 23
Derivation of the Heller–McConnell equation, Simple. 894
Direct solution of Schroedinger equation for vibration via spreadsheet (BULLETIN). Stephen K. Knudson. A39
Electron distribution in the hydrogen molecule: A new approach, Describing. 743
Electron weaken a bond? Can addition of a bonding. 282
Fourier transform in X-ray and electron scattering of hydrogenlike atoms, The. 889
How great is the great orthogonality theorem? 200
Hydrogen atoms in interstellar space, Very large. 454
Interpretation of simple closed-shell and split-shell wave functions of atomic two-electron systems, On the. 197
Linear chain magnetism. 361

Molecular orbital wave functions in terms of resonance structures, Understanding. 583
Molecular orbitals for second-row homonuclear diatomic molecules: The effect of s-p mixing, The relative energies of. 737
Normal coordinate calculations as a classroom computer project (CS). 35
Pascal's triangle to nuclei of any spin, Generalization of. 853
Pictorialized solid state MO's: A nonmathematical but honest approach. 739
Quantum history chart. 473
Quantum mechanics with a spreadsheet (BULLETIN). A282
Rotational levels with respect to full symmetry point groups, Simple way of labeling. 574
Tabular method for reducing representations, The. 373
There are no such things as orbitals—Act two! 131
Two-dimensional atomic and molecular orbital displays using mathematica (CS). 487
Use of the desktop molecular modeller software in the teaching of structural chemistry (CS). 576
Using the perturbed harmonic oscillator to introduce Rayleigh–Schrodinger perturbation theory. 203
Why is mercury liquid? 110

There are no such things as orbitals—Act two! **Jack Simons.** 131
Thermal decomposition of diacyl peroxides and peresters: An undergraduate laboratory experiment using infrared absorptions to monitor decomposition rates. **Michael D. Mosher; Sandra Vincson; Jodi Connagahan; Regina Forsythe; Melvyn W. Mosher.** 510
Thermochemistry experiment, Small-scale (ML). **Henry Brouwer.** A178
Thermochromic behavior of cobalt(II) halides in nonaqueous solvents and on filter paper (TD). **William D. Bare; E. K. Mellon.** 779

Thermodynamics

Altitude and boiling point (LTE). 622.
Concepts of mass and energy (TF). 826
Efficiency of reversible heat engines: The possible misinterpretation of a corollary to Carnot's theorem, The (TF). 208
Entropy-controlled reactions: An interesting textbook error (TF). 474
Frost on the pumpkin, Why there's. 825
Incompressible solid and a thermodynamic functional determinant, Thermodynamics of an. 830
Legendre transformation and spreadsheets, The. 893
Reusable heat pack (TD). 780
Sorption of liquids by polymer films: A simple laboratory experiment, Kinetic and thermodynamic study on the. 343
Standard enthalpies of formation of ions in solution. 41
Thermodynamic equilibrium constant (CP). 138
Thermodynamic irreversibility—What is it? 31
Temperature and pressure dependence of the equilibrium properties of a system: Introducing thermodynamics in the classroom, The. 294
Temperature and pressure on chemical equilibrium in nonideal systems, Influences of. 295
Visual presentation of the relationships between the enthalpies of a reaction and the nature of the transition states, A. 731

Thin-layer chromatography experiment, An internal comparison of the Intermolecular forces of common organic functional groups: A. **Robert Beauvais; R. W. Holman.** 428
Thiocyanate, homo- and heterobinuclear complexes: A laboratory project in macrocyclic coordination chemistry utilizing a range of physical techniques, N-only bridging. **Josie Hunter; Brian Murphy; Jane Nelson.** 59
Third World laboratories: The experience of Zimbabwe, Instrumentation and maintenance requirements of (TICI). **S. D. Sithole.** A300
Titration of chromate–dichromate mixtures: A new experiment for quantitative analysis. **L. H. Kalbus; R. H. Petrucci; J. E. Forman; G. E. Kalbus.** 677
Titration plots using spreadsheet scripting, Advanced (CS). **James O. Currie, Jr.; Richard V. Whiteley, Jr.** 923
Titrations, Computer interfacing: A new look at acid–base (CS). **John R. Amend; Kathleen A. Tucker; Ronald P. Furstenau.** 857
Titrimetric determination using laser-beam scattering for endpoint determination (TD). **David W. Brooks; Edward J. Lyons.** 155
TLC tank, Empty jam bottle or qualitative. **Saqib Ali; M. Mazhar.** 593

Topics in chemical instrumentation, edited by Frank A. Settle, Jr. (Jan.–June) and Howard E. Stroebel (July–Dec.)

A flexible automated laboratory system for the qualitative analysis of selected metal cations. **James F. Blankenship; Steven Costello; Matthew Sprouse; Frank A. Settle, Jr.; Rosina H. Bolen; Michael A. Pleva.** A65
Instrumentation and maintenance requirements of Third World laboratories: The experience of Zimbabwe. **S. D. Sithole.** A300
The Pittsburgh Conference on analytical chemistry and applied spectroscopy: An educational experience. **Frank A. Settle, Jr.** A37

Toxicity using bacteria: An undergraduate laboratory experiment, Testing for chemical. **H. Brouwer.** 695
Transition metal complexes with 1,4,7-trithiacyclononane: A laboratory experiment in coordination chemistry. **Gregory J. Grant; Penny L. Mauldin; William N. Setzer.** 605
Transition states, A Visual presentation of the relationships between the enthalpies of a reaction and the nature of the. **H. LeRoy Nyquist.** 731
Trash bags in a glove box, Blowing up balloons and. **Gerald C. Roper; Gabor Kiss; Shakti L. Mukerjee; Carl D. Hoff.** 508
Triakis icosahedron constructed in an easy way, A paper model for a. **S. Y. Lam-Leung; S. K. Tsang.** 996
Triakis octahedron, A convergent approach to models of trigonal bipyramid, cube, and. **S. Y. Lam-Leung; Albert W. M. Lee; S. K. Tsang; H. M. Wong.** 643
Tricapped trigonal prism model, An easily constructed. **Shukichi Yamana.** 640
Trigonal bipyramid, cube, and triakis octahedron, A convergent approach to models of. **S. Y. Lam-Leung; Albert W. M. Lee; S. K. Tsang; H. M. Wong.** 643
Tungsten carbonyl anions, Synthesis and characterization of dinuclear. **Timothy J. McNeese.** 678
Turbidity meter, Acid rain experiment and construction of a simple. **Eric A. Betterton.** 254
Tutor for general chemistry, CHEMPROF: An intelligent (CS). **Arthur Eggert; Catherine Middlecamp; Elizabeth Kean.** 403
Two-year college, Scholarship and chemistry teaching in the. **Sudhir B. Abhyankar; Arthur M. Last; Patrick K. Monaghan; Robert R. Perkins; Geoffrey W. Rayner Canham; J. Norman Reed; Michael J. Webb.** 145

U

Undergraduate research, An alternate approach to teaching. **Larry L. Kirk; Larry F. Hanne.** 839
Undergraduate research program, The evolution of a viable. **Wing hong Chan; Albert Wai ming Lee.** 647
Undergraduates outreach to secondary schools, Science and the Environment: College. **Nathan Carlson; Tamara Strickland; Albert Shen; William H. Zoller.** 1021
Units, Descriptive (LTE). **Robert L. Wadlinger.** 709
Units, Descriptive (LTE). **Sebastian G. Canagaratna.** 709
Unknowns in analytical chemistry, The use of real life samples for. **Anne T. Sherren.** 598
Unknowns in the introductory analytical chemistry lab, Multifunctional base. **Jonathan A. Werner; T. C. Werner.** 600
UV/IR spectroscopy illustrated: An integrated freshman lab session, Synthesis, oxidation and (MODLAB). **Uri Zoller; Aviva Lubezky; Miriam Danot.** A274

V

Vacuum leak detection with a Tesla coil, Efficient, inexpensive, and useful techniques for low. **Gary S. Coyne; Cathy L. Cobb.** 526
Video programs used in the process of chemistry teaching, Interactive computer- (CS). **Hanna Gulinska; Rafal Lewicki; Andrzej Burewicz.** 490

View from my classroom, edited by Frank Cardulla

Adding heart and soul to the chemistry classroom. **Sherry Berman-Robinson.** 999
A modest radical proposal. **Stephen R. Marsden.** 770
So, what can I do for extra credit? **Miriam R. White.** 395

Vinyl chloride in Asia (IND). **Roy H. King; Bryan G. Reuben.** 480
Viscometer design for polymer solutions, A new. **Jagjit R. Khurma.** 63
Viscosity races (TD). **William M. Hemmerlin; Kenton B. Abel.** 417
Visual presentation of the relationships between the enthalpies of a reaction and the nature of the transition states, A. **H. LeRoy Nyquist.** 731
Voltaic pile: A stimulating general chemistry experiment, The (TD). **Pirketta Scharlin; Rubin Battino.** 665
Voltammetry experiment by digital simulation, A (CS). **Gaspar Sanchez; Guillermo Codina; Antonio Aldaz.** 489
Voltammetry experiment, Rotating disk. **Julie L. Town; Fiona MacLaren; Howard D. Dewald.** 352
Voltammetry, The determination of axial ligand binding constants for iron porphyrins by cyclic. **David K. Geiger; Edmund J. Paviak; Lawrence T. Kass.** 337
Volume measurement, An evaluation of drop counting as a (ML). **James Ealy; Miles Pickering.** A120
Volumes of liquid, A laboratory skills test: Determining students' ability to transfer specific. **Richard S. Mitchell.** 941
Volumetric titration, Microcomputer automation of (BULLETIN). **W. C. Mak; R. S. Tse.** A95
VSEPR, A magnetic two-dimensional analogue of (OP). **C. Frank Shaw III; Bryan A. Shaw.** 861
VSEPR theory, A magnetic illustration of the (OP). **Manuel Hervas; L. Phillip Silverman.** 861

W

Waste reduction, The Minnesota Technical Assistance Program offers intern experience in industrial. **Donna N. Peterson; Fay Thompson.** 499

Water and its associated ions, Acid and base dissociation constants of. **A. M. de Lange; J. H. Potgieter.** 304

Water leveling device for gas law experiments, An inexpensive. **John H. Bedenbaugh; Angela O. Bedenbaugh.** 673

Water molecules for overhead projection, Magnetic models of ions and (OP). **William G. Davies.** 245

Wave functions of atomic two-electron systems, On the interpretation of simple closed-shell and split-shell. **Marten J. ten Hoor.** 197

Welsbach and the development of incandescent gas lighting, Carl Auer von. **John T. Stock.** 801

What do instructors expect from beginning chemistry students? **Tony Mitchell.** 116

What is wrong with the general chemistry course? **Ronald J. Gillespie.** 192

What's the use (LTE). **Alton J. Banks.** 712

What's the use (LTE). **Ernest R. Birnbaum.** 712

What's the use? by Alton Banks

Magnesium. 196

White lead—from the east or the west, The origin of. **C. M. Wai; K. T. Liu.** 25

Whodunit: Forensic examination of pen inks, A chemistry. **Michael N. Quigley; Hongyan Qi.** 596

Wilson's disease, Copper precipitation in the human body. **R. P. Csintalan; N. M. Senozan.** 365

Wittig synthesis of alkenes by phase-transfer catalysis: The syntheses of 4,4′-dichlorostilbenes and of *E,E*-1,4-diphenylbutadiene, The (ML). **Stephen W. Breuer.** A58

Women chemists, A reentry program for. **Suzanne Varimbi; Sr. Mary Leo Bryan, S.H.C.J.** 544

Women in the United States: A historical perspective, Chemistry doctorates awarded to. **Kenneth G. Everett; Will S. DeLoach.** 545

Women scientists and physicians of antiquity and the Middle Ages. **Caroline L. Herzenberg; Susan V. Meschel; James A. Altena.** 101

Wonder of chemistry, The (LTE). **Harold Hart.** 534

WPI Conference: "New practical examples for general chemistry", Report on the. **H. Beall.** 381

WPI–NEACT conference: "General chemistry; Approaching the 21st century," Report on. **H. Beall.** 835

Writing consultants, An approach to improving communication skills in a laboratory setting: The use of. **Ronald A. Bailey; Cheryl Geisler.** 150

Writing in college chemistry: A practical bibliography 1980–1990, Teaching. **Nancy Patterson Shires.** 494

Writing in general chemistry: A tool for increasing comprehension and communication, In-class. **H. Beall.** 148

XYZ

X-ray and electron scattering of hydrogenlike atoms, The Fourier transform in. **Jeffrey A. Foley.** 889

X-ray diffraction pattern simulator, On an (LTE). **Silvio Rodriguez.** 969

X-ray diffraction pattern simulator, On an (LTE). **Stephen Z. Goldberg.** 969

X-ray powder diffraction patterns, Spreadsheet calculations for (BULLETIN). **Jeffrey Rosenthal.** A285

X-ray technique: Principles, comparison with other techniques, practical applications, The delayed. **A.E. Pillay.** 173

Zeolite: An experiment in solid-state chemistry, The preparation and characterization of an X-type. **Kenneth J. Balkus, Jr.; Kieu T. Ly.** 875
